Answers to Selected Exercises

Chapter 0

Section 0.1
1. \(-48\), \(3/2\), \(5\), \(-1\), \(7\), \(9\), \(11\), \(33\), \(13\), \(14\)
2. \(15\), \(5/18\), \(17\), \(13.31\), \(19\), \(6\), \(21\), \(43/16\), \(23\), \(0\)
3. \(3^2 (2 - 5)\) 27. \(3^3 (2 - 5)\) 29. \((3 - 1) / (8 + 6)\)
41. \(-5\) \((31)\) \(-9\) 32. \(3^{2/3}\) \(-x\) \(-y^2\)
53. \((2 - 3e^{x-2}) / (2 - 3e^{-2x})\) or \(4^x / (2 - 3e^{-2x})\)
61. \((31)\) \(-9\)

Section 0.2
27. \(-36\), \(5/4\), \(7\), \(-1/8\), \(9\), \(16\), \(11\), \(2\), \(32\)
28. \((x^3)^6\) 31. \(3^2\) \(x^4\) 33. \(3^{2/3}\) \(x^2\) \(3/\sqrt{x}\)
35. \(-0.3x^2 - 6/5x\) \(37.2\)
39. \(1/2\), \(4/3\), \(43.2/5\), \(45.7\), \(47.5\), \(49.5\), \(-6.68\)
51. \(3/2\), \(53.2\), \(55.2\) 61. \(18x^2 + 3x^3\)

Section 0.3
1. \(4x^3 + 6x\), \(3\), \(2x^3\) \(-y^2\), \(5\), \(x^2 + 2x - 3\)
7. \(2y^2 + 3y + 1\) 9. \(4x^2 - 12x + 9\) 11. \(x^2 + 2 + 1/x^2\)
13. \(4x^2 - 9\) \(15.\) \(y^2 - 1/2\) \(17.\) \(2x^3 + 6x^2 + 2x - 4\)
19. \(x^4 - 4x^2 + 3x - 1\) 21. \(y^3 + 4y^2 + 4y - 3\)
23. \((x + 1)(2x + 5)\) \(25.\) \((x^2 + 1)^2\) \((x^2 + x + 4)\)
27. \(-x^2(x^2 + 1)/(x + 1)\)
31. \(x(2 + 3x)\) \(33.\) \(2x^2(3x - 1)\)
35. \(a(x - 1)(x - 7)\) \(37.\) \(x(3 - 3)(x + 4)\)
39. \(2x^2(3x - 1)\) \(41.\) \(a(2 + 1)(x - 2)\)

Chapter 1

Section 0.4
1. \(\frac{2x^2 - 7x - 4}{x^2 - 1}\) 3. \(\frac{3x^2 - 2x + 5}{x^2 - 1}\)
7. \(\frac{2x - 3}{x^3}\) \(11.\) \(\frac{x^2 + x + 1}{x + 1}\)
15. \(-2(x + y)\) \((x^2 + y)^2\)

Section 0.5
1. \(-1\), \(3\), \(5\), \(13/4\), \(7\), \(43/7\), \(9\), \(-1\)
11. \(-a/b\)
13. \(x = -4, 1/2\) \(15.\) No solutions
17. \(\frac{2}{\sqrt{2}}\) \(19.\) \(-1\)
21. \(-1, 3\) \(23.\) \(\pm\frac{\sqrt{5}}{2}\) \(25.\) \(\pm1\)
29. \(\pm\sqrt{-1 - \frac{5}{2}}\) \(31.\) \(-1, -2, -3\)
33. \(-3\) \(35.1\)
37. \(-2\) \(39.\) \(1, \pm\sqrt{3}\)
41. \(\pm1, \pm\frac{1}{\sqrt{2}}\)
43. \(-2, -1, 2, 3\)

Section 0.6
1. \(0, 3\), \(\pm\sqrt{3}\) \(5.\) \(-1, -5/2\)
7. \(-3\), \(9\), \(-1\), \(-1\)
11. \(x = -1(x = -2)\) is not a solution.
13. \(-2, -3/2, -1\)
15. \(-1, \pm\sqrt{2}\)
19. \(\pm\frac{\sqrt{3}}{2}\)
21. \(-1, x^2 - 2x + 5\)

Chapter 1

Section 1.1
1. \(a\), \(2\), \(b\), \(0.5\) \(a\), \(-1.5\), \(b\), \(8\), \(c\), \(-8\)
5. \(a\), \(-7\), \(b\), \(-3\)
7. \(c\), \(d\), \(4y - 3\)
9. \((a + b) - 3\)
11. \(a\), \(b\), \(c\), \(d\), \(2\), \(d\)
13. \(a\), \(b\), \(c\), \(d\), \(2\), \(a\)

Section 2.1
1. \(0.5\), \(1.5\), \(2.5\), \(3.5\), \(4.5\), \(5.5\), \(6.5\), \(7.5\), \(8.5\), \(9.5\)

Section 3.1
23. \((x^2 + 1)^2 / (x^2 + 1)^2\)

25. \(a\), \(P(5) = 117\)
26. \(a\), \(P(10) = 132, \) and \(P(9.5) = 131)\)

27. a. [0, 10]. \( t \geq 0 \) is not an appropriate domain because it would predict U.S. trade with China into the indefinite future with no basis. b. $280 billion; U.S. trade with China in 2004 was valued at approximately $280 billion. 29. a. (2) $36.8 billion 31. a. 358,600 b. 361,200 c. $6.00 33. a. \( P(0) = 200 \): At the start of 1995, the processor speed was 200 megahertz. \( P(4) = 500 \): At the start of 1999, the processor speed was 500 megahertz. \( P(5) = 1100 \): At the start of 2000, the processor speed was 1100 megahertz. b. Midway through 2001
c.

43. \( t; m \) 45. \( y(x) = 4x^2 - 2 \) or \( f(x) = 4x^2 - 2 \)
47. \( N(t) = 200 + 10t \) \( (N \) is number of sound files, \( t \) is time in days) 49. As the text reminds us: to evaluate \( f \) of a quantity (such as \( x + h \)) replace \( x \) everywhere by the whole quantity \( x + h \), getting \( f(x + h) = (x + h)^2 - 1 \).
51. False: Functions with infinitely many points in their domain (such as \( f(x) = x^2 \)) cannot be specified numerically.

Section 1.2
1. a. 20 b. 30 c. 30 d. 20 e. 0 3. a. -1 b. 1.25 e. 0 d. 1 e. 0 5. a. (I) b. (IV) c. (V) d. (VI) e. (III) f. (II)
7. 9.

11. \(-x^3\)

13. a. -1 b. 2 c. 2

17. a. 0 b. 2 c. 3 d. 3

19. \( f(6) \approx 2000, f(9) \approx 2800, f(7.5) \approx 2500 \). In 1996, 2,000,000 SUVs were sold. In 1999, 2,800,000 were sold, and in the year beginning July, 1997, 2,500,000 were sold.

21. \( f(6) - f(5) \); SUV sales increased more from 1995 to 1996 than from 1999 to 2000.
23. a. \([-1.5, 1.5]\) b. \( N(-0.5) \approx 131, N(0) \approx 132, N(1) \approx 132 \). In July 1999, approximately 131 million people were employed. In January 2000 and January 2001, approximately 132 million people were employed. c. \([0.5, 1.5]\); Employment was falling during the period July 2000–July 2001.
25. a. (C) b. $20.80 per shirt if the team buys 70 shirts. Graph:

27. A quadratic model (B) is the best choice; the other models either predict perpetually increasing value of the euro or perpetually decreasing value of the euro. 29. a. \( 100*(1-12200/t^4.48) \) b. Graph:
35. True. We can construct a table of values from any graph by reading off a set of values. 37. False. In a numerically specified function, only certain values of the function are specified, giving only certain points on the graph. 39. They are different portions of the graph of the associated equation \( y = f(x) \). 41. The graph of \( g(x) \) is the same as the graph of \( f(x) \), but shifted 5 units to the right.

**Section 1.3**

1. Missing value: 11; \( m = 3 \)  3. Missing value: \(-4\); \( m = -1 \)  5. Missing value: \( 7; m = 3/2 \)  7. \( f(x) = -x/2 - 2 \)  9. \( f(0) = -5; f(x) = -x - 5 \)  11. \( f \) is linear: \( f(x) = 4x + 6 \)  13. \( g \) is linear: \( g(x) = 2x - 1 \)  15. \(-3/2 \)  17. \( 1/6 \)  19. Undefined  21.  0  23. \(-4/3 \)

25.

27.

29.

31.

33.

35.

37.

41.  2  43. \(-2 \)  45. Undefined  47. \( 1.5 \)  49. \(-0.09 \)  51. \( 1/2 \)  53. \( (d-b)/(c-a) \)  55. a. 1  b. 1/2  c. 0  d. 3  e. \(-1/3 \)  f. \(-1 \)  g. Undefined  h. \(-1/4 \)  i. \(-2 \)  57. \( y = 3x \)  59. \( y = \frac{1}{4}x - 1 \)  61. \( y = 10x - 203.5 \)  63. \( y = -5x + 6 \)  65. \( y = -3x + 2.25 \)  67. \( y = -x + 12 \)  69. \( y = 2x + 4 \)  71. Compute the corresponding successive changes \( \Delta x \) in \( x \) and \( \Delta y \) in \( y \), and compute the ratios \( \Delta y / \Delta x \). If the answer is always the same number, then the values in the table come from a linear function. 73. \( f(x) = -\frac{a}{b}x + \frac{c}{b} \). If \( b = 0 \), then \( y \) is undefined, and \( y \) cannot be specified as a function of \( x \). (The graph of the resulting equation would be a vertical line.) 75. slope, 3

77. If \( m \) is positive then \( y \) will increase as \( x \) increases; if \( m \) is negative then \( y \) will decrease as \( x \) increases; if \( m \) is zero then \( y \) will not change as \( x \) changes. 79. The slope increases, since an increase in the \( y \)-coordinate of the second point increases \( \Delta y \) while leaving \( \Delta x \) fixed.

**Section 1.4**

1. \( C(x) = 1500x + 1200 \) per day  a. \$5700 \ b. \$1500 \ c. \$1500 \ 3. Fixed cost = \$8000, marginal cost = \$25 per bicycle  5. a. \( C(x) = 0.4x + 70; R(x) = 0.5x \)  b. \( P(x) = 0.1x - 70 \)  c. 700 copies  7. \( q = -40p + 2000 \)  9. a. \( q = -p + 156.4 \)  53.4 million phones  11. a. Demand: \( q = -60p + 150 \); supply: \( q = 80p - 60 \)  13. a. (1996, 125) and (1997, 135) or (1998, 140) and (1999, 150). \( b \). The number of new in-ground pools increased most rapidly during the periods 1996–1997 and 1998–1999, when it rose by 10,000 new pools in a year. 15. \( N = 400 + 50t \) million transactions. The slope gives the additional number of online shopping transactions per year, and is measured in (millions) of transactions per year. 17. a. \( s = 14.4t + 240 \); Medicare spending is predicted to rise at a rate of \$14.4 billion per year. \( b \). \$816 billion  19. a. 2.5 ft/sec \ b. 20 feet along the track \ c. after 6 seconds  21. a. 130 miles per hour \ b. \( s = 130t - 1300 \) \ c. After 5 seconds  23. \( F = 1.8C + 32 \)  86°F; 72°F; 14°F  25. \( I(N) = 0.05N + 50,000 \); \( N = \$1,000,000 \); marginal income is \( \$500 \) per dollar of net profit. 27. \( w = 2n - 58; 42 \) billion pounds  29. \( c = 0.075m - 1.5; 0.75 \) pounds  31. \( T(r) = (1/4)r + 45 \); \( T(100) = 70 \) °F  33. \( P(x) = 100x - 5132 \), with domain \( [0, 405] \). For profit, \( x \geq 52 \)  35. 5000 units  37. \( FC/(SP - VC) \)  39. \( P(x) = 579.7x - 20,000 \), with domain \( x \geq 0 \); \( s = 34.50 \) g per day for break even  41. Increasing by \$355,000 per year  43. a. \( y = -30r + 200 \) \ b. \( 50t - 200 \)  45. \( C(t) = \) \( \begin{cases} -1,400t + 30,000 & \text{if } 0 \leq t \leq 5 \\ 7,400t - 14,000 & \text{if } 5 < t \leq 10 \end{cases} \)  47. \( d(r) = \) \( \begin{cases} -40r + 74 & \text{if } 1.1 \leq r \leq 1.3 \\ 130r - 103 & \text{if } 1.3 < r \leq 1.6 \end{cases} \)  49. Bootlegs per zonar; bootlegs  51. It must increase by 10 units each day, including the third. \( 53. (B) \)  55. Increasing the number of items from the breakeven results in a profit: Because the slope of the revenue graph is larger than the slope of the cost graph, it is higher than the cost graph to the right of the point of intersection, and hence corresponds to a profit.
Section 1.5

13. a. $r = 0.9959$ (best, not perfect) b. $r = 0.9538$

c. $r = 0.3273$ (worst)

Totals

$y = 75x + 258.33; 858.33$ million

17. $y = 2.5x + 5.67; S13.17$ billion

19. $y = 0.135x + 0.15; 6.9$ million jobs

21. a. $y = 1.62x - 23.87$. Graph:

b. Each acre of cultivated land produces about 1.62 tons of soybeans

c. $y = -0.40x + 29$. Graph:

The graph suggests a relationship between $x$ and $y$. b. The poverty rate declines by 0.40% for each $1000$ increase in the median household income. c. $r = -0.7338$; not a strong correlation

25. a. $p = 0.13r + 0.22$. Graph:

b. Yes; the first and last points lie above the regression line, while the central points lie below it, suggesting a curve.

Chapter 1 Review

1. a. 1 b. -2 c. 0 d. -1 3. a. 1 b. 0 c. 0 d. -1

5. $y = -0.40x + 29$. Graph:

15. $y = -x + 1$ 17. $y = (1/2)x - 1$ 19. The first line, $y = x + 1$, is the better fit. 21. $y \approx 0.857x + 1.24, r \approx 0.92$

23. a. (A) b. (A) Leveling off (B) Rising (C) Rising; they begin to fall after 7 months (D) Rising 25. a. 2080 hits per day

b. Probably not. This model predicts that Web site traffic will start to decrease as advertising increases beyond $8500$ per month, and then drop toward zero. 27. a. $q = -60p + 950$

b. 50 novels per month c. $10$, for a profit of $1200$.

Chapter 2

Section 2.1

1. (2, 2) 3. (3, 1) 5. (6, 6) 7. (5/3, -4/3) 9. (0, -2)

11. $(x, (1 - 2x)/3) \text{ or } (1/2(1 - 3y), y)$ 13. No solution

15. (5, 0) 17. (0.3, -1.1) 19. (116.6, -69.7) 21. (3.3, 1.8)

23. (3.4, 1.9) 25. 200 quarts of vanilla and 100 quarts of mocha

27. 2 servings of Mixed Cereal and 1 serving of Mango Tropical Fruit

29. a. 4 servings of beans and 5 slices of bread

b. No. One of the variables in the solution of the system has a negative value.

31. Mix 5 servings of Cell-Tech and 6 servings of Ribo-Force HP for a cost of $20.60. 33. 100 CSICO, 150 NOK

35. 100 ED, 200 KSE 37. 242 in favor and 193 against
39. 5 soccer games and 7 football games 41. 7 43. $1.50 each 45. 55 widgets 47. Demand: \( q = -4p + 47 \);
supply: \( q = 4p - 29 \); equilibrium price: $9.50 49. 33 pairs of
dirty socks and 11 T-shirts 51. $1200 53. A system of three
equations in two unknowns will have a unique solution if either
(1) the three corresponding lines intersect in a single point, or (2)
two of the equations correspond to the same line, and the third
line intersects it in a single point. 55. Yes. Even if two lines
have negative slope, they will still intersect if the slopes differ.
57. You cannot round both of them up, because there will not be
sufficient eggs and cream. Rounding both answers down will en-
sure that you will not run out of ingredients. It may be possible to
round one answer down and the other up, and this should be tried.
59. (B) 61. (B) 63. Answers will vary. 65. It is very likely.
Two randomly chosen straight lines are unlikely to be parallel.

Section 2.2
1. (3, 1) 3. (6, 6) 5. \((\frac{1}{2} (1 - 3z), y, z)\), \(y\) arbitrary 7. No solution
17. \((-1, -3, -\frac{1}{3})\) 19. \((z, z, z)\), \(z\) arbitrary 21. No solution
23. \((-1, 1, 1)\) 25. \((1, z - 2, z)\), \(z\) arbitrary 27. \((4 + y, y, -1)\),
\(y\) arbitrary 29. \((4 - y/3 + z/3, y, z)\), \(y\) arbitrary, \(z\) arbitrary
31. \((-17, 20, -2)\) 33. \((-\frac{3}{2}, 0, 0)\) 35. \((-3z, 1 - 2z, z, 0)\),
z arbitrary 37. \((\frac{1}{2} (7 - 17z + 8w), \frac{1}{2} (1 - 6z - 6w), z, w)\), z,
w arbitrary 39. \((1, 2, 3, 4, 5)\) 41. \((-2, -2 + z - u, z, 0)\), u arbitrary
43. (16, 12/7, -162/7, -88/7) 45. \((-8/15, 7/15, 7/15, 7/15)\) 47. (1, 0, 4, 0.2) 49. \((-5.5, -0.9, -7.4, -6.6)\)
51. A pivot is an entry in a matrix that is selected to “clear a col-
umn;” that is, use the row operations of a certain type to obtain
zeros everywhere above and below it. “Pivoting” is the proceedure
of clearing a column using a designated pivot. 53. \(2R_1 + 5R_4\),
or \(6R_1 + 15R_4\) (which is less desirable). 55. It will include a
row of zeros. 57. The claim is wrong. If there are more equa-
tions than unknowns, there can be a unique solution as well as
row(s) of zeros in the reduced matrix, as in Example 6. 59. Two
61. The number of pivots must equal the number of variables,
because no variable will be used as a paramater. 63. A simple ex-
ample is: \(x = 1; y - z = 1; x + y - z = 2\).

Section 2.3
1. 100 batches of vanilla, 50 batches of mocha, and 100 batches
of strawberry 3. 3 sections of Finite Math, 2 sections of Applied
Calculus and 1 section of Computer Methods 5. 5 of each
7. 22 tons from Cheesy Cream, 56 tons from Super Smooth &
Sons, and 22 tons from Bagel’s Best Friend 9. 10 evil sorcerers,
50 trolls, and 500 orcs 11. $3.6 billion for rock music, $1.8 bil-
lion for rap music, and $0.4 billion for classical music. 13. It
donated $600 to each of the MPBF and the SCN, and $1200 to
the Jets. 15. United: 120; American: 40; Southwest: 50
17. $5000 in PNF, $2000 in FDMMX, $2000 in FFLIX
19. 100 APPL, 20 HPQ, 80 DELL 21. Microsoft: 88 million,
Time Warner: 79 million, Yahoo: 75 million, Google: 42 million
23. The third equation is \(x + y + z + w = 1\). General Solution:
\(x = -1.58 + 3.89w, y = 1.63 - 2.99w, z = 0.95 - 1.9w, w\)
arbitrary. State Farm is most impacted by Other.
25. (a) Brooklyn to Manhattan: 500 books; Brooklyn to Long
Island: 500 books; Queens to Manhattan: 1000 books; Queens
to Long Island: 1000 books. (b) Brooklyn to Manhattan: 1000
books; Brooklyn to Long Island: none; Queens to Manhattan: 500
books; Queens to Long Island: 1500 books, giving a total cost of
$8000. 27. (a) The associated system of equations has infinitely
many solutions. (b) No; the associated system of equations still
has infinitely many solutions. c. Yes; North America to
Australia: 440,000, North America to South Africa: 190,000,
Europe to Australia: 950,000, Europe to South Africa: 950,000.
29. (a) \(x + y = 14,000\); \(z + w = 95,000\); \(x + z = 63,550\);
y + w = 45,450. The system does not have a unique solution,
indicating that the given data are insufficient to obtain the
missing data. (b, x, y, z, w) = (5600, 8400, 57950, 37050)
31. (a) No; The general solution is: Eastward Blvd.: \(S + 200\);
Northwest La.: \(S + 50\); Southwest La.: \(S\), where \(S\) is arbitrary.
Thus it would suffice to know the traffic along Southwest La.
(b, Yes, as it leads to the solution Eastward Blvd.: 260; North-
west La.: 110; Southwest La.: 60. (c) 50 vehicles per day 33. (a) No;
the corresponding system of equations is underdetermined. The
net flow of traffic along any of the three stretches of Broadway
would suffice. (b) West 35. $10 billion
37. \(x = \text{Water}, y = \text{Gray matter,} z = \text{Tumor}\) 39. \(x = \text{Water,}
y = \text{Bone,} z = \text{Tumor,} u = \text{Air}\) 41. Tumor 43. 200 Demo-
crats, 20 Republicans, 13 of other parties 45. Yes; $20m in Com-
pany X, $5m in Company Y, $10m in Company Z, and $30m in
Company W 47. It is not realistic to expect to use exactly all of
the ingredients. Solutions of the associated system may involve
negative numbers or not exist. Only solutions with nonnegative
values for all the unknowns correspond to being able to use up all
of the ingredients. 49. Yes; \(x = 100\) 51. Yes; \(0.3x - 0.7y + 0.3z = 0\) is one form of the equation. 53. No; represented by an
inequality rather than an equation. 55. Answers will vary.

Chapter 2 Review
1. One solution

3. Infinitely many solutions

\[ y = \frac{1}{2} x + 1 \]

\[ y = \frac{1}{2} x - 1 \]
41. Profit = Revenue - Cost;

<table>
<thead>
<tr>
<th></th>
<th>2004</th>

43. 1980 distribution = $A = \begin{bmatrix} 49.1 & 58.9 & 75.4 & 43.2 \end{bmatrix}; 1990 distribution = $B = \begin{bmatrix} 50.8 & 59.7 & 85.4 & 52.8 \end{bmatrix}; Net change 1980 to 1990 = $A - $B = \begin{bmatrix} 1.7 & 0.8 & 10 & 9.6 \end{bmatrix}$ (all net increases)

45. Total Bankruptcy Filings = Filings in Manhattan + Filings in Brooklyn + Filings in Newark = 450 + 300 + 300 = 1050; Filings in New York + Filings in Illinois = 450 + 300 = 750; Filings in Illinois = 300; Difference = New York - Illinois = 150.

49. a. Use = \begin{bmatrix} 2 & 4 & 20 \end{bmatrix}; b. After 4 months.

51. a. $A = \begin{bmatrix} 440 & 190 \end{bmatrix}; \quad D = \begin{bmatrix} 50 & 100 \end{bmatrix}$

53. The $i^{th}$ entry of the sum $A + B$ is obtained by adding the $i^{th}$ entries of $A$ and $B$.

55. It would have zeros down the main diagonal: $A = \begin{bmatrix} 0 & \# & \# & \# \\ \# & 0 & \# & \# \\ \# & \# & 0 & \# \\ \# & \# & \# & 0 \end{bmatrix}$ The symbols \# indicate arbitrary numbers.

57. $(A^T)_{ij} = A_{ji}$

59. Answers will vary.

61. The associativity of matrix addition is a consequence of the associativity of addition of numbers, since we add matrices by adding the corresponding entries (which are real numbers).
### Answers to Selected Exercises

#### Section 3.2

9. \([3 \ 0 \ -6 \ -2]\) 11. \([-6 \ 37 \ 7]\)

13. \[
\begin{bmatrix}
-4 & -7 & -1 \\
9 & 17 & 0
\end{bmatrix}
\]

15. \[
\begin{bmatrix}
0 & 1 \\
0 & 0
\end{bmatrix}
\]

17. \[
\begin{bmatrix}
1 & -1 \\
1 & -1
\end{bmatrix}
\]

19. \[
\begin{bmatrix}
0 & 0 \\
0 & 0
\end{bmatrix}
\]

21. Undefined

23. \[
\begin{bmatrix}
1 & -5 & 3 \\
0 & 9 & 1 \\
0 & 4 & 1
\end{bmatrix}
\]

25. \[
\begin{bmatrix}
3 \\
-4 \\
3
\end{bmatrix}
\]

27. \[
\begin{bmatrix}
0.23 & 5.36 & -21.65 \\
-13.18 & -5.82 & 16.62 \\
-11.21 & 9.99 & 0.23
\end{bmatrix}
\]

29. \[
A^2 = \begin{bmatrix} 0 & 0 & 1 \\ 0 & 0 & 1 \\ 0 & 0 & 0 \end{bmatrix}, \quad A^3 = \begin{bmatrix} 0 & 0 & 1 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}
\]

31. \[
\begin{bmatrix}
4 & -1 \\
-1 & 7
\end{bmatrix}
\]

33. \[
\begin{bmatrix}
4 & -1 \\
-12 & 2
\end{bmatrix}
\]

35. \[
\begin{bmatrix}
-2 & 1 & -2 \\
10 & -2 & 2 \\
-10 & 2 & 2
\end{bmatrix}
\]

37. \[
\begin{bmatrix}
-2 + x - z & 2 - r & -6 + w \\
10 + 2z & -2 + 2r & 10 \\
-10 - 2z & 2 - 2r & -10
\end{bmatrix}
\]

39. a–d. \(P^2 = P^4 = P^8 = P^{1000} = \begin{bmatrix} 0.2 & 0.8 \\ 0.2 & 0.8 \end{bmatrix} \)

41. a. \(P^2 = \begin{bmatrix} 0.01 & 0.99 \\ 0 & 1 \end{bmatrix} \)

b. \(P^4 = \begin{bmatrix} 0.0001 & 0.9999 \\ 0 & 1 \end{bmatrix} \)

c. and d. \(P^8 \approx P^{1000} \approx \begin{bmatrix} 0 & 1 \\ 0 & 1 \end{bmatrix} \)

43. a–d. \(P^2 = P^4 = P^8 = P^{1000} = \begin{bmatrix} 0.25 & 0.25 & 0.50 \\ 0.25 & 0.25 & 0.50 \\ 0.25 & 0.25 & 0.50 \end{bmatrix} \)

45. \(2x - y + 4z = 3; -4x + 3y/4 + z/3 = -1; -3x = 0 \)

47. \(x - y + w = -1; x + y + 2z + 4w = 2 \)

49. \[
\begin{bmatrix}
1 & -1 \\
2 & -1
\end{bmatrix}
\begin{bmatrix}
x \\
y
\end{bmatrix} = \begin{bmatrix} 4 \\ 0 \end{bmatrix}
\]

51. \[
\begin{bmatrix}
1 & 1 & -1 \\
2 & 1 & 1 \\
\frac{1}{2} & 0 & \frac{1}{2}
\end{bmatrix}
\begin{bmatrix}
x \\
y \\
z
\end{bmatrix} = \begin{bmatrix} 8 \\ 4 \\ 1 \end{bmatrix}
\]

53. Revenue = Price \times Quantity = \[
\begin{bmatrix}
15 & 10 & 12 \\
50 & 40 & 30
\end{bmatrix} \]

55. Price: Soft \[
\begin{bmatrix}
30 \\
15
\end{bmatrix}
\]

57. Number of books = Number of books per editor \times Number of editors = [3 3.5 5 5.2] \[
\begin{bmatrix}
16,000 \\
15,000 \\
12,500 \\
13,000
\end{bmatrix} = 230,600 \text{ new books}
\]

59. $4300 billion (or $4.3 trillion) 61. \(D = N(F - M)\) where \(N\) is the income per person, and \(F\) and \(M\) are, respectively, the female and male populations in 2005, $140 billion. 63. \([1.2 \ 1.0]\), which represents the amount, in billions of pounds, by which cheese production in north central states exceeded that in western states.

65. Number of bankruptcy filings handled by firm = Percentage handled by firm \times Total number = \[
[0.10 \ 0.05 \ 0.20] \begin{bmatrix}
150 & 150 & 150 \\
300 & 300 & 250 \\
250 & 250 & 200
\end{bmatrix} = [80 \ 80 \ 67.5]
\]

67. The number of filings in Manhattan and Brooklyn combined in each of the months shown.

69. \([1 \ -1 \ 1] \begin{bmatrix}
300 & 300 & 250 \\
250 & 250 & 200
\end{bmatrix} = [300]
\]

71. \[
\begin{bmatrix}
2 & 16 & 20 \\
1 & 4 & 40 \\
0 & 10 & 15
\end{bmatrix}
\begin{bmatrix}
100 & 150 \\
50 & 40 \\
10 & 15
\end{bmatrix} = \begin{bmatrix} $1200 \ $1240 \\
$700 \ $910 \end{bmatrix}
\]

73. \(AB = \begin{bmatrix} 29.6 \\
97.5 \\
89.5 \end{bmatrix}, \ AC = \begin{bmatrix} 22 \\
47.5 \\
8 \end{bmatrix}\) The entries of \(AB\) give the number of people from each of the three regions who settle in Australia or South Africa, while the entries in \(AC\) break those figures down further into settlers in South Africa and settlers in Australia. 75. Distribution in 2003 = \(A = \begin{bmatrix} 53.3 \\
64.0 \\
101.6 \end{bmatrix}\); Distribution in 2004 = \(A \cdot P \approx \begin{bmatrix} 53.1 \\
63.9 \\
102.0 \end{bmatrix}\) 77. Answers will vary. One example: \(A = \begin{bmatrix} 1 & 2 \\
2 & 3 \end{bmatrix}, B = \begin{bmatrix} 1 & 2 \\
4 & 5 \\
6 \end{bmatrix}\) Another example: \(A = \begin{bmatrix} 1 \\
2 \end{bmatrix}, B = \begin{bmatrix} 1 & 2 \end{bmatrix}\). 79. Multiplication of \(1 \times 1\) matrices is just ordinary multiplication of the single entries: \([a][b] = [ab]\).

81. The claim is correct. Every matrix equation represents the equality of two matrices. Equating the corresponding entries gives a system of equations. 83. Answers will vary. Here is a possible scenario: costs of items A, B and C in 1995 = \([10 \ 20 \ 30]\), percentage increases in these costs in 1996 = \([0.5 \ 0.1 \ 0.20]\), actual increases in costs = \([10 \times 0.5 \ 20 \times 0.1 \ 30 \times 0.20]\) 85. It produces a matrix whose \(ij\) entry is the product of the \(ij\) entries of the two matrices.
Section 3.3
1. Yes  3. Yes  5. No  7. \[ \begin{bmatrix} -1 & 1 \\ 2 & -1 \end{bmatrix} \]  9. \[ \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \]
11. \[ \begin{bmatrix} 1 & -1 \\ -1 & 2 \end{bmatrix} \]  13. Singular  15. \[ \begin{bmatrix} 0 & 1 \\ 0 & 1 \end{bmatrix} \]
17. \[ \begin{bmatrix} 1 & -1 \\ 2 & 0 \\ -1 & 1 \end{bmatrix} \]  19. \[ \begin{bmatrix} 1 & 1 \\ 2 & -1 \\ -1 & 2 \end{bmatrix} \]

21. Singular  23. \[ \begin{bmatrix} 1 & -2 & 1 \\ 0 & 1 & -2 \\ 0 & 0 & 1 \end{bmatrix} \]
25. \[ \begin{bmatrix} 2 & 1 \\ 1 & -2 \\ 0 & 0 \end{bmatrix} \]  27. \[ \begin{bmatrix} 6 \\ 6 \\ 0 \end{bmatrix} \]
29. \[ \begin{bmatrix} -2 & 1 \\ 3 & -1 \\ 6 & 2 \end{bmatrix} \]
31. \[ \begin{bmatrix} 31/36 \\ 6 \\ 0 \end{bmatrix} \]
33. 0; Singular

35. \[ \begin{bmatrix} 0.38 & 0.49 \\ 0.49 & -0.41 \end{bmatrix} \]  37. \[ \begin{bmatrix} 0.00 & -0.99 \\ 0.81 & 2.87 \end{bmatrix} \]
41. \[ \begin{bmatrix} 91.35 & -8.65 \\ 0 & 0 \end{bmatrix} \]
43. \[ \begin{bmatrix} 5/2 & 3/2 \end{bmatrix} \]

45. (6, -4)  47. (6, 6, 6)  49. a. (10, -5, -3) b. (6, 1, 5) c. (0, 0, 0)

51. a. 10/3 servings of beans, and 5/6 slices of bread

3. \( p \choose r \)  5. \[ \begin{bmatrix} -1 & 10 \\ 2 & -4 \end{bmatrix} \]
7. \( A + B \)  9. \( A - B \)

Section 3.4
1. \[ \begin{bmatrix} 1 & 0 \\ 2 & -4 \end{bmatrix} \]  3. \[ \begin{bmatrix} 3 & 5 \\ 6 & 2 \end{bmatrix} \]
5. \[ \begin{bmatrix} -1 & -1 \\ 1 & -1 \end{bmatrix} \]

7. Strictly determined. A’s optimal strategy is; B’s optimal strategy is; value: 1
11. Not strictly determined

13. \[ \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \end{bmatrix} \]  15. 19. \[ \begin{bmatrix} 1/4 & 3/4 \end{bmatrix} \]
21. \[ \begin{bmatrix} 3/4 & 1/4 \end{bmatrix} \]
23. \[ \begin{bmatrix} 3/4 & 1/4 \end{bmatrix} \]

25. You Invade

F = France; S = Sweden; N = Norway;

You Opponent Defends

F  S  N
F [1 -1 1]
S [1 -1 1]
N [1 1 -1]

29. B = Brakpan; N = Nigel; S = Springs;

You Opponent

B  N  S
B [0 0 1000]
N [0 1000 0]
S [1000 -1000 0]

31. P = PleasantTap; T = Thunder Rumble; S = Strike the Gold, N = None;

Winner

P  T  S  N
P [25 -10 -10 -10]
S [25 -10 -10 -10]
T [25 -10 -10 -10]

33. a. CE should charge $1000 and GCS should charge $900; 15% gain in market share for CE b. CE should charge $1200 (the more CE can charge for the same market, the better!)

35. Pablo vs. Noto; evenly matched
37. Both commanders should use the northern route; 1 day

Confess

39. Kerry

41. a. F  O  b. Both candidates should visit

Ohio, leaving Bush with a 21% chance of winning the election.

43. You can expect to lose 39 customers.
45. Option 2: move to the suburbs.
Answers to Selected Exercises

Section 3.5

1. a. $0.8$  b. $0.2$  c. $0.05$

3. $\begin{bmatrix} 0.2 & 0.1 \\ 0.5 & 0 \end{bmatrix}$

5. $\begin{bmatrix} 52,000 & 40,000 \\ 2560 & 3000 \end{bmatrix}^T$

7. $\begin{bmatrix} 50,000 & 50,000 \\ 2560 & 3000 \end{bmatrix}^T$

9. $\begin{bmatrix} 27,000 & 28,000 \\ 10 & 1 \end{bmatrix}^T$

11. $\begin{bmatrix} 50,000 & 100 \\ 10 & 1 \end{bmatrix}^T$

13. Increase of 100 units in each sector.

15. Increase of $\begin{bmatrix} 1.5 & 0.2 & 0.1 \end{bmatrix}^T$; the $i$th column of $(I - A)^{-1}$ gives the change in production necessary to meet an increase in external demand of one unit for the product of Sector $i$.

17. $A = \begin{bmatrix} 0.2 & 0.4 & 0.5 \\ 0 & 0.8 & 0 \\ 0 & 0.2 & 0.5 \end{bmatrix}$

19. Main DR: $\$80,000$, Bits & Bytes: $\$38,000$

21. Equipment Sector production approximately $\$86,000$ million, Components Sector production approximately $\$140,000$ million.

23. a. $0.006$  b. $\$20,000$

25. Columns of $\begin{bmatrix} 1140.99 & 2.05 & 13.17 & 20.87 \\ 332.10 & 1047.34 & 26.05 & 111.18 \\ 83.88 & 95.69 & 215.50 & 1016.15 \end{bmatrix}$

(in millions of dollars)

27. a. $\$0.78$  b. Other food products

29. It would mean that all of the sectors require neither their own product or the product of any other sector. 31. It would mean that all of the output of that sector was used internally in the economy; none of the output was available for export and no importing was necessary.

33. It means that an increase in demand for one sector (the column sector) has no effect on the production of another sector (the row sector). 35. Usually, to produce one unit of one sector requires less than one unit of input from another. We would expect then that an increase in demand of one unit for one sector would require a smaller increase in production in another sector.

Chapter 3 Review

1. Undefined 3. $\begin{bmatrix} 1 & 0 \\ 2 & 3 \end{bmatrix}$

5. $\begin{bmatrix} 1 & -1/2 & -5/2 \\ 0 & 1/4 & -1/4 \end{bmatrix}$

7. $\begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$

9. $\begin{bmatrix} 2 & 4 \\ 1 & 12 \end{bmatrix}$

11. $\begin{bmatrix} 1 & 1 \\ 0 & 1 \end{bmatrix}$

13. $\begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$

15. Singular 17. $\begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$

19. $\begin{bmatrix} 1 & 2 \\ 1 & 1 \end{bmatrix}$

21. $R = [0 1 0], C = [0 1 0]^T, e = 1$

23. $R = [0.8 0.2 0.5], C = [0.2 0 0.8], e = 0.2$

25. $\begin{bmatrix} 1100 \\ 700 \end{bmatrix}$

27. $\begin{bmatrix} 48,125 \\ 22,500 \\ 10,000 \end{bmatrix}$

29. $\begin{bmatrix} 2500 & 4000 & 3000 \\ 1500 & 3000 & 1000 \end{bmatrix}$

31. Revenue = Quantity $\times$ Price

$= \begin{bmatrix} 280 & 550 & 100 \\ 50 & 500 & 120 \end{bmatrix} \begin{bmatrix} 5 \\ 6 \\ 5.5 \end{bmatrix} = \begin{bmatrix} 5250 \\ 3910 \end{bmatrix}$

33. $\begin{bmatrix} 2000 & 4000 & 4000 \end{bmatrix} \begin{bmatrix} 0.8 & 0.1 & 0 \\ 0.4 & 0.6 & 0 \\ 0.2 & 0 & 0.8 \end{bmatrix} = \begin{bmatrix} 4000 & 2600 & 3400 \end{bmatrix}$

35. Here are three. (1) It is possible for someone to be a customer at two different enterprises, (2) Some customers may stop using all three of the companies. (3) New customers can enter the field.

37. Loss = Number of shares $\times$ (Purchase price – Dividends – Selling price) =

$= \begin{bmatrix} 1000 & 2000 & 2000 \end{bmatrix} \begin{bmatrix} 20 & 0.10 & 3 \\ 10 & 0.10 & 1 \\ 5 & 0 & 1 \end{bmatrix} = \begin{bmatrix} 42,700 \end{bmatrix}$

39. Go with the “3 for 1” promotion and gain $20,000 customers from JungleBooks.

41. $A = \begin{bmatrix} 0.1 & 0.5 \\ 0.01 & 0.05 \end{bmatrix}$

43. $\$1190$ worth of paper, $\$1802$ worth of books.

\[
\begin{array}{c}
\text{Graph of} \quad 220x = 2500 \quad \text{and} \quad 5x + 5y = 12,100.
\end{array}
\]

Corner points: (0, 200), (0, 220), (220, 20)

43. \( x = \# \text{full-page ads in Sports Illustrated}, y = \# \text{full-page ads in GQ} \)

\[
\begin{array}{c}
\text{Graph of} \quad 20x + 20y = 220 \quad \text{and} \quad 6x + 0.15y = 3.
\end{array}
\]

Corner points: (3, 7), (4, 3) (Rounded)

45. An example is \( x \geq 0, y \geq 0, x + y \geq 1 \) 47. The given triangle can be described as the solution set of the system \( x \geq 0, y \geq 0, x + 2y \leq 2 \). 49. Answers may vary. One limitation is that the method is only suitable for situations with two unknown quantities. Accuracy is also limited when graphing. 51. (C) 53. (B) 55. There are no feasible solutions; that is, it is impossible to satisfy all the constraints. 57. Answers will vary.

**Section 4.2**

1. \( p = 6, x = 3, y = 3 \) 3. \( c = 4, x = 2, y = 2 \) 5. \( p = 24, x = 7, y = 3 \) 7. \( p = 16, x = 4, y = 2 \) 9. \( c = 1.8, x = 6, y = 2 \) 11. Max: \( p = 16, x = 4, y = 6 \) Min: \( p = 2, x = 2, y = 0 \) 13. No optimal solution; objective function unbounded 15. \( c = 28; (x, y) = (14, 0) \) and (6, 4) and the line connecting them 17. \( c = 3, x = 3, y = 2 \) 19. No solution; feasible region empty 21. You should make 200 quarts of vanilla and 100 quarts of mocha. 23. Ruff, Inc., should use 100 oz of grain and no chicken. 25. Feed your child 1 serving of cereal and 1 serving of dessert. 27. Purchase 60 compact fluorescent light bulbs and 960 square feet of insulation for a saving of $312 per year in energy costs. 29. Mix 5 servings of Cell-Tech and 6 servings of RiboForce HP for a cost of $20.60. 31. Make 200 Dracula Salamis and 400 Frankenstein Sausages, for a profit of $1400. 33. Buy no shares of IBM and 500 shares of HPQ for maximum company earnings of $600. 35. Buy 220 shares of MO and 20 shares of RAI for a minimum total risk index is \( c = 500 \). 37. Purchase 20 spots on “Becker” and 20 spots on “The Simpsons.” 39. He should instruct in diplomacy for 10 hours per week and in battle for 40 hours per week, giving a weekly profit of 2400 ducats. 41. Gillian could expend a minimum of 360,000 pico-shirleys of energy by using 480 spell spells and 160 shock spells. (There is actually a whole line of solutions joining the one above with \( x = 2880/7, y = 1440/7 \)) 43. 100 hours per week for new customers and 60 hours per week for old customers. 45. (A) 47. Every point along the line connecting them is also an optimal solution. 49. Answers will vary. 51. Answers will vary. 53. Answers will vary. A simple example is the following: Maximize profit \( p = 2x + y \) subject to \( x \geq 0, y \geq 0 \). Then \( p \) can be made as large as we like by choosing large values of \( x \) and/or \( y \). Thus there is no optimal solution to the problem. 55. Mathematically, this means that there are infinitely many possible solutions: one for each point along the line joining the two corner points in question. In practice, select those points with integer solutions (because \( x \) and \( y \) must be whole numbers in this problem) that are in the feasible region and close to this line, and choose the one that gives the largest profit.

**Section 4.3**

1. \( p = 8; x = 4, y = 0 \) 3. \( p = 4; x = 4, y = 0 \) 5. \( p = 80; x = 10, y = 0, z = 10 \) 7. \( p = 53; x = 5, y = 0, z = 3 \) 9. \( x = 14,500; x_1 = 0, x_2 = 500/3, x_3 = 5000/3 \) 11. \( p = 6; x = 2, y = 1, z = 0, w = 3 \) 13. \( p = 7; x = 1, y = 0, z = 2, w = 0, v = 4 \) (or: \( x = 1, y = 0, z = 2, w = 1, v = 3 \).
15. \( p = 21; x = 0, y = 2.27, z = 5.73 \)
16. \( p = 4.52; x = 1, y = 0, z = 4.67, w = 1.52 \)
17. \( p = 7.7; x = 1.1, y = 0, z = 2.2, w = 0, v = 4 \)
18. You should purchase 500 calculus texts, no history texts and no marketing texts. The maximum profit is $5000 per semester.
19. The company can make a maximum profit of $650 by making 100 gallons of PineOrange, 200 gallons of PineKiwi, and 150 gallons of OrangeKiwi.
20. The department should offer no Ancient History, 30 sections of Medieval History, and 15 sections of Modern History, for a profit of $1,050,000. There will be 500 students without classes, but all sections and professors are used.
21. Plant 80 acres of tomatoes and leave the other 20 acres unplanted. This will give you a profit of $160,000.
22. It can make a profit of $10,000 by selling 20,000 quarts of orange concentrate and none of the others for a maximum of 75g creatine.
23. Allocate $2,250,000 to automobile loans, $500,000 to signboards; Toronto to Venice Beach: 200 boards, giving 820 boards and other secured loans.
24. Invest $75,000 in Universal, none in the rest. Another optimal solution is: Invest $18,750 in Universal, and $75,000 in EMI.
25. Tucson to Honolulu: 290 boards; Tucson to Venice Beach: 330 boards; Toronto to Honolulu: 0 boards; Toronto to Venice Beach: 200 boards, giving 820 boards shipped.
26. Fly 10 people from Chicago to Los Angeles, 5 people from Chicago to New York, and 10 people from Denver to New York.
27. Yes; the given problem can be stated as: Maximize \( p = 3x - 2y \) subject to \(-x + y - z \leq 0, x - y - z \leq 6\).
28. The graphical method applies only to LP problems in two unknowns, whereas the simplex method can be used to solve LP problems with any number of unknowns. She is correct.
29. A basic solution to a system of linear equations is a solution in which all the non-pivotal variables are taken to be zero; that is, all variables whose values are arbitrary are assigned the value zero. To obtain a basic solution for a given system of linear equations, one can row reduce the associated augmented matrix, write down the general solution, and then set all the parameters (variables with “arbitrary” values) equal to zero.
30. No. Let us assume for the sake of simplicity that all the pivots are 1’s. (They may certainly be changed to 1’s without affecting the value of any of the variables.) Because the entry at the bottom of the pivot column is negative, the bottom row gets replaced by itself plus a positive multiple of the pivot row. The value of the objective function (bottom-right entry) is thus replaced by itself plus a positive multiple of the nonnegative rightmost entry of the pivot row. Therefore, it cannot decrease.

Section 4.4
1. \( p = 20/3; x = 4/3, y = 16/3 \)
2. \( p = 850/3; x = 50/3, y = 25/3 \)
3. \( p = 750; x = 0, y = 150, z = 0 \)
4. \( p = 135; x = 0, y = 25, z = 0, w = 5 \)
5. \( c = 80; x = 20/3, y = 20/3 \)
6. \( c = 0, y = 0, z = 0 \)
7. \( c = 111; x = 1, y = 1, z = 1 \)
8. \( c = 200; x = 200, y = 0, z = 0, w = 0 \)
9. \( c = 136.75; x = 0, y = 25.25, z = 0, w = 15.25 \)
10. \( c = 66.67; x = 0, y = 66.67, z = 0 \)
11. \( c = -250; x = 0, y = 500, z = 500; w = 1500 \)
12. Plant 100 acres of tomatoes and no other crops. This will give you a profit of $200,000. (You will be using all 100 acres of your farm.)
13. Allocate 15 bundles from Nadir, 5 from Sonny, and none from Blunt. Cost: $70,000. Another solution resulting in the same cost is no mailings to the East Coast, 15 to the Midwest, none to the West Coast.
14. Total cost will amount to $188 million.
15. She is correct.
29. 4 ounces each of fish and cornmeal, for a total cost of 40¢ per can; 5/12¢ per gram of protein, 5/12¢ per gram of fat.
31. 100 oz of grain and no chicken, for a total cost of $1; 1/2¢ per gram of protein, 0¢ per gram of fat.
33. One serving of cereal, one serving of juice, and no dessert! for a total cost of 37¢; 6¢ per calorie and 17¢ per gram of protein, 0¢ per gram of fat.
35. 10 mailings to the East coast, none to the Midwest, 15 mailings to the West Coast. Cost: $900; 20¢ per Democrat and 40¢ per Republican.
37. Gillian should use 480 sleep spells and 160 shock spells, costing 360,000 pico-shirleys of energy OR 2880/7 sleep spells and 1440/7 shock spells. T. N. Spend should spend about 73% of the days in Littleville, 27% in Metropolis, and skip Urbantown. T. L. Down should spend about 91% of the days in Littleville, 9% in Metropolis, and skip Urbantown. The expected outcome is that T. L. Down will lose about 227 votes per day of campaigning.
41. Each player should show one finger with probability 1/2, two fingers with probability 1/3, and three fingers with probability 1/6. The expected outcome is that player A will win 2/3 point per round, on average. Write moves as (x, y) where x represents the number of regiments sent to the first location and y represents the number sent to the second location. Colonel Blotto should play (0, 4) with probability 4/9, (2, 2) with probability 1/9, and (4, 0) with probability 4/9. Captain Kije has several optimal strategies, one of which is to play (0, 3) with probability 1/30, (1, 2) with probability 8/15, (2, 1) with probability 16/45, and (3, 0) with probability 7/90. The expected outcome is that Colonel Blotto will win 14/9 points on average.
43. The dual of a standard minimization problem satisfying the nonnegative objective condition is a standard maximization problem, which can be solved using the standard simplex algorithm, thus avoiding the need to do Phase I. Answers will vary. An example is: Minimize $c = x - y$ subject to $x - y \geq 100$, $x + y \geq 200$, $x \geq 0$, $y \geq 0$. This problem can be solved using the techniques in Section 4.4.
45. Build 1 convention-style hotel, 4 vacation-style hotels and 2 small motels. 51. Answers will vary.
unit invested as opposed to 1.01262 units for Chile. 55. 41.02% 57. 51.90% if you sold in February, 2005 59. No. Compound interest increase is exponential. The graph looks roughly exponential in that period, but to really tell we can compare interest rates between marked points to see if the rate remained roughly constant: From December 1997 to August 1999 the rate was (16.31/3.28)\(^{1/20} \approx 1.6179\) or 161.79%, while from August 1999 to March 2000 the rate was (33.95/16.31)\(^{1/7} \approx 2.5140\) or 251.40%. These rates are quite different. 61. 31 years; about $26,100. 65. a. $15,528.23 b. $54,701.29 c. 23.51% 67. The function \(y = P(1 + r/m)^{mx}\) is not a linear function of \(x\), but an exponential function. Thus, its graph is not a straight line. 69. Wrong. Its growth is exponential and can be modeled by 0.01(1.10)\(^t\). 71. The graphs are the same because the formulas give the same function of \(x\); a compound-interest investment behaves as though it was being compounded once a year at the effective rate. The effective rate exceeds the nominal rate when the interest is compounded more than once a year because then interest is being paid on interest accumulated during each year, resulting in a larger effective rate. Conversely, if the interest is compounded less often than once a year, the effective rate is less than the nominal rate. 75. Compare their future values in constant dollars. The investment with the larger future value is the better investment. 77. The graphs are approaching a particular curve as \(m\) gets larger, approximately the curve given by the largest two values of \(m\).

### Section 5.3

1. $15,528.23  3. $171,793.82  5. $23,763.28  7. $147.05  9. $491.12  11. $105.38  13. $90,155.46  15. $69,610.99  17. $95,647.68  19. $554.60  21. $1366.41  23. $524.14  25. $248.85  27. $1984.65  29. $999.61  31. $998.47  33. 3.617%  35. 3.059%  37. $973.54  39. $7451.49  41. You should take the loan from Solid Savings & Loan: it will have payments of $248.85 per month. The payments on the other loan would be more than $300 per month. 43. Answers using correctly rounded intermediate results:

### Chapter 6

### Section 6.1

1. \(F =\{\text{spring, summer, fall, winter}\}\)  3. \(I =\{1, 2, 3, 4, 5, 6\}\)  5. \(A =\{1, 2, 3\}\)  7. \(B =\{2, 4, 6, 8\}\)  9. \(a. S =\{(H, H), (H, T), (T, H), (T, T)\}\)  \(b. S =\{(H, H), (H, T), (T, H)\}\)  11. \(S =\{(1, S), (2, 4), (3, 3), (4, 2), (5, 1)\}\)  13. \(S =\{(1, S), (2, 4), (3, 3)\}\)  15. \(S =\emptyset\)  17. 
21. A 23. B 25. {June, Janet, Jill, Justin, Jeffrey, Sally, Solly, Molly, Jolly} 27. {Jello} 29. Ø 31. {Jello}
33. {Janet, Justin, Jello, Sally, Solly, Molly, Jolly} 35. {(small, triangle), (small, square), (medium, triangle), (medium, square), (large, triangle), (large, square)}
37. {(small, blue), (small, green), (medium, blue), (medium, green), (large, blue), (large, green)}
39.

41.

43. B × A = \{1H, 1T, 2H, 2T, 3H, 3T, 4H, 4T, 5H, 5T, 6H, 6T\}
45. A × A × A = \{HHH, HHT, HTT, THH, THT, TTH, HHH, HHT, HTT, THH, THT, TTH, HHH, HHT, HTT, THH, THT, TTH\}
47. \{(1,1), (1,3), (1,5), (2,1), (2,3), (2,5), (3,1), (3,3), (3,5), (5,1), (5,3), (5,5)\}
49. Ø 51. \{(1,1), (1,3), (1,5), (3,1), (3,3), (3,5), (5,1), (5,3), (5,5), (2,2), (2,4), (2,6), (4,2), (4,4), (4,6), (6,2), (6,4), (6,6)\}
61. A ∩ B = \{Acme, Crafts\} 63. B ∪ C = \{Acme, Brothers, Crafts, Dion, Effigy, Global, Hilbert\} 65. A′ ∩ C = \{Dion, Hilbert\}
67. A ∩ B′ ∩ C′ = Ø

71. I ⊕ J 73. (B) 75. Answers may vary. Let A = \{1\}, B = \{2\}, and C = \{1, 2\}. Then (A ∩ B) ∪ C = \{1, 2\} but A ∩ (B ∪ C) = \{1\}. In general, A ∩ (B ∪ C) must be a subset of A, but (A ∩ B) ∪ C need not be; also, (A ∩ B) ∪ C must contain C as a subset, but A ∩ (B ∪ C) need not.
77. A universal set is a set containing all “things” currently under consideration. When discussing sets of positive integers, the universe might be the set of all positive integers, or the set of all integers (positive, negative, and 0), or any other set containing the set of all positive integers.
79. A is the set of suppliers who deliver components on time, B is the set of suppliers whose components are known to be of high quality, and C is the set of suppliers who do not promptly replace defective components.
81. Let A = \{movies that are violent\}, B = \{movies that are shorter than two hours\}, C = \{movies that have a tragic ending\}, and D = \{movies that have an unexpected ending\}.

The given sentence can be rewritten as “She prefers movies in A′ ∩ B ∩ (C ∪ D)′.” It can also be rewritten as “She prefers movies in A′ ∩ B ∩ C′ ∩ D′.”

Section 6.2
1. 9 3. 7 5. 4 7. n(A ∪ B) = 7, n(A) + n(B) − n(A ∩ B) = 4 + 5 − 2 = 7 9. 4 11. 18 13. 72 15. 60 17. 20 19. 6 21. 9 23. 4 25. n((A ∩ B)′) = 9, n(A′) + n(B′) − n((A ∪ B)′) = 6 + 7 − 4 = 9
27.
31. 76,000  32. 2  35. C ∩ N is the set of authors who are both successful and new. C ∪ N is the set of authors who are either successful or new (or both). n(C) = 30; n(N) = 20; n(C ∩ N) = 5; n(C ∪ N) = 45; 45 = 30 + 20 + 5
37. C ∩ N' is the set of authors who are successful but not new. n(C ∩ N') = 25  39. 31.25%; 83.33%  41. N ∩ C; n(N ∩ C) = 8 billion  43. C ∩ N'; n(C ∩ N') = 13 billion
45. A ∩ (N ∪ U); n(A ∩ (N ∪ U)) = 14 billion
47. V' ∩ I'; n(V' ∩ I') = 15  49. 80; The number of stocks that were not either pharmaceutical stocks, or were unchanged in value after a year (or both).
51. 3/8; the fraction of Internet stocks that increased in value

53. a. 931  b. 382
55. a. 37.5%  57. 17  59. The number of elements in the Cartesian product of two finite sets is the product of the number of elements in the two sets. 61. Answers will vary.
63. When A ∩ B ≠ ∅  65. When B ⊆ A
67. n(A ∪ B ∪ C) = n(A) + n(B) + n(C) − n(A ∩ B) − n(B ∩ C) − n(A ∩ C) + n(A ∩ B ∩ C)

Section 6.3
1. 10 3. 30  5. 6 outcomes  7. 15 outcomes

Chapter 7
Section 7.1
1. S = {HH, HT, TH, TT}; E = {HH, HT, TH}  3. S = {HHH, HHT, HTH, HTT, THH, THT, TTH, TTT}; E = {HTT, THT, THH, TTT}
61. a. Internet stocks that increased in value: 24, 30, 31, 32, 34, 40, 41, 42, 43

b. all sets of 4 gummy candies chosen from the packet of 12

c. (e, o), (e, r)

65. a. The dog’s “fight” drive is weakest.

b. Either the dog’s “fight” and “flight” drives are either both strongest or both weakest.

c. The dog’s “flight” drive is strongest, or its “flight” drive is strongest.

67. C(6, 4) = 15; C(1, 1)C(5, 3) = 10

69. a. n(S) = P(7, 3) = 210

b. E ∩ F is the event that Celera wins and Electoral College is in second or third place. In other words, it is the set of all lists of three horses in which Celera is first and Electoral College is second or third. n(E ∩ F) = 10.

71. C(8, 3) = 56

73. C(4, 1) C(2, 1) C(2, 1) = 16

75. Subset of the sample space

77. E and F do not both occur

79. True; Consider the following experiment: Select an element of the set S at random.

81. Answers may vary. Cast a die and record the remainder when the number facing up is divided by 2.

83. Yes. For instance, E = {(2, 5), (5, 1)} and $F = \{(4, 3)\}$ are two such events.

Section 7.2

7.575 9. The second coin seems slightly biased in favor of heads, because heads come up approximately 58% of the time. On the other hand, it is conceivable that the coin is fair and that heads came up 58% of the time purely by chance. Deciding which conclusion is more reasonable requires some knowledge of inferential statistics.

15. $P(E) = \frac{1}{4}$ 17. $P(E) = 1$

19. $P(E) = \frac{3}{4}$ 21. $P(E) = \frac{3}{4}$ 23. $P(E) = \frac{1}{2}$

25. $P(E) = \frac{1}{3}$ 27. $P(E) = 0$ 29. $P(E) = \frac{1}{4}$

31. 1/12; {(4, 4), (2, 3), (3, 2)}

33. $P((1, 2, 3)) = \frac{4}{9}$

35. $P(E) = \frac{1}{8}$ 37. $P(E) = \frac{15}{16}$

39. a. 0.04  b. 0.98

b. 0.5 41. a. Dial-up: 0.63, Cable Modem: 0.21, DSL: 0.15, Other: 0.01  b. .36

75. \( P(1) = 0 \), \( P(6) = 0 \); \( P(2) = P(3) = P(4) = P(5) = \frac{1}{4} = .25 \)

77. \( P(1) = P(6) = 1/10 \); \( P(2) = P(3) = P(4) = P(5) = 1/5 \), \( P(\text{odd}) = 1/2 \)

79. \( P(1, 1) = P(2, 2) = \ldots = P(6, 6) = 1/66; P(1, 2) = \ldots = P(6, 5) = 1/33, \)
\( P(\text{odd sum}) = 6/11 \)

81. \( P(2) = 15/38; P(4) = 3/38, \)
\( P(1) = P(3) = P(5) = \frac{6}{38}, P(\text{odd}) = 15/38 \)

83. The fraction of times \( E \) occurs \( 85 \). Wrong. For a pair of fair dice, the theoretical probability of a pair of matching numbers is \( 1/6 \), as Ruth says. However, it is quite possible, although not very likely, that if you cast a pair of fair dice 20 times, you will never obtain a matching pair (in fact, there is approximately a 2.6% chance that this will happen). In general, a nontrivial claim about theoretical probability can never be absolutely validated or refuted experimentally. All we can say is that the evidence suggests that the dice are not fair. \( 87 \). For a (large) number of days, record the temperature prediction for the next day and then check the actual temperature the next day. Record whether the prediction was accurate (within, say, \( 2^\circ \text{F} \) of the actual temperature). The fraction of times the prediction was accurate is the estimated probability. \( 89 \). He is wrong. It is possible to have a run of losses of any length. Tony may have grounds to suspect that the game is rigged, but no proof.

Section 7.3

1. .65  3. .1  5. 7  7. 4  9. 25  11. 1.0  13. .3  15. 1.0  17. No; \( P(A \cup B) \) should be \( \leq P(A) + P(B) \).

19. Yes  21. No; \( P(A \cup B) \) should be \( \geq P(B) \).

23. \( P(e) = .2 \) a. .9  b. .95  c. .1  d. 8  25. 5/6

39. .54  41. .01  43. .56  45. .43  47. 22%; 100%

49. All of them  51. .884  53. They are mutually exclusive.

55. Wrong. For example, the theoretical probability of winning a state lottery is small but nonzero. However, the vast majority of people who play state lottery of their lives never win, no matter how frequently they play. \( 57 \). When \( A \cap B = \emptyset \) we have \( P(A \cap B) = P(\emptyset) = 0 \), so \( P(A \cup B) = P(A) + P(B) - P(A \cap B) = P(A) + P(B) - 0 = P(A) + P(B) \). \( 59 \). Zero. According to the assumption, no matter how many thunderstorms occur, lightning cannot strike your favorite spot more than once, and so, after \( n \) trials the estimated probability will never exceed \( 1/n \), and so will approach zero as the number of trials gets large.

61. \( P(A \cup B \cup C) = P(A) + P(B) + P(C) - P(A \cap B) - P(A \cap C) - P(B \cap C) + P(A \cap B \cap C) \)

Section 7.4

1. 1/42  3. 7/9  5. 1/7  7. 1/2  9. 41/42  11. 1/15  13. 4/15  15. 1/5  17. 1/(2^3 \times 5^1)  19. .4226

21. .0475  23. .0020  25. .1/27\( ^{19} \)  27. 1/7  29. Probability of being a big winner = 1/2,118,760 \( \approx .000000472 \). Probability of being a small-fry winner = 225/2,118,760 \( \approx .00106194 \). Probability of being either a winner or a small-fry winner = 226/2,118,760 \( \approx .00106666 \).

31. a. \( C(600,300)/C(700,400) \)  b. \( C(699,399)/C(700,400) \) or \( 400/700 \)  33. \( P(10,3)/10^3 = 18/25 = .72 \)  35. .81/88

37. 1/8  39. 1/8  41. 1/37/1000  43. a. 90,720  b. 25,200
c. 25,200/90,720 = 25/90 \( \approx .28 \)  45. The four outcomes listed are not equally likely; for example, (red, blue) can occur in four ways. The methods of this section yield a probability for (red, blue) of \( C(2, 2)/C(4, 2) = 1/6 \)  47. No. If we do not pay attention to order, the probability is \( C(5, 2)/C(9, 2) = 10/36 = 5/18 \). If we do pay attention to order, the probability is \( P(5, 2)/P(9, 2) = 20/72 = 5/18 \) again.

49. Answers will vary.

63. 76 65. 33 67. 37 69. 98 71. Answers will vary. Here is a simple one: E: the first toss is a head, F: the second toss is a head, G: the third toss is a head.
93. The probability you seek is \( P(E \cap F) \), or should be. If, for example, you were going to place a wager on whether \( E \) occurs or not, it is crucial to know that the sample space has been reduced to \( F \) (you know that \( F \) did occur). If you base your wager on \( P(E) \) rather than \( P(E \cap F) \) you will misjudge your likelihood of winning. 95. If \( A \subseteq B \) then \( A \cap B = A \), so \( P(A \cap B) = P(A) \) and \( P(A \cap B) = P(A \cap B) / P(B) = P(A) / P(B) \). 97. Your friend is correct. If \( A \) and \( B \) are mutually exclusive then \( P(A \cap B) = 0 \). On the other hand, if \( A \) and \( B \) are independent then \( P(A \cap B) = P(A)P(B) \). Thus, \( P(A)P(B) = 0 \). If a product is 0 then one of the factors must be 0, so either \( P(A) = 0 \) or \( P(B) = 0 \). Thus, it cannot be true that \( A \) and \( B \) are mutually exclusive, have nonzero probabilities, and are independent all at the same time. 99. \( P(A' \cap B') = 1 - P(A \cup B) = 1 - [P(A) + P(B) - P(A \cap B)] = (1 - P(A))(1 - P(B)) = P(A')P(B') \).

Section 7.6
23. a. 14.43%; b. 19.81% of single homeowners have pools. Thus they should go after the single homeowners. 25. 9
27. 9310 29. 1.76% 31. 20 33. \( K \): child killed; D: Airbag deployed; \( P(K \mid D) = 1.31 \) \( P(K \mid D') \); \( P(D \mid K) = 1.31(25)/(1.31(25) + .75) = .30 \). 35. Show him an example like Example 1 of this section, where \( P(T \mid A) = .95 \) but \( P(T \mid A) \approx .64 \). 37. Suppose that the steroid test gives 10% false negatives and that only 0.1% of the tested population uses steroids. Then the probability that an athlete uses steroids, given that he or she has tested positive, is

\[
\frac{(9)(.001)}{(9)(.001) + (.01)(.999)} \approx .083.
\]
39. Draw a tree in which the first branching shows which of \( R_1 \), \( R_2 \), or \( R_3 \) occurred, and the second branching shows which of \( T \) or \( T' \) then occurred. There are three final outcomes in which \( T \) occurs:
\[
P(R_1 \cap T) = P(T \mid R_1) P(R_1), \quad P(R_2 \cap T) = P(T \mid R_2) P(R_2), \quad \text{and} \quad P(R_3 \cap T) = P(T \mid R_3) P(R_3).
\]
In only one of these, the first, does \( R_1 \) occur. Thus, \( P(R_1 \mid T) = \frac{P(R_1 \cap T)}{P(T)} = \frac{P(T \mid R_1) P(R_1)}{P(T \mid R_1) P(R_1) + P(T \mid R_2) P(R_2) + P(T \mid R_3) P(R_3)} \).
41. The reasoning is flawed. Let A be the event that a Democrat agrees with Safire’s column, and let F and M be the events that a Democrat reader is female and male respectively. Then A. D. makes the following argument:

\[ P(M \mid A) = 0.9, \quad P(F \mid A') = 0.9. \] Therefore, \( P(A \mid M) = 0.9. \)

According to Bayes’ Theorem we cannot conclude anything about \( P(A \mid M) \) unless we know \( P(A) \), the percentage of all Democrats who agreed with Safire’s column. This was not given.

55. Answers will vary. 57. There are two assumptions made by Markov systems that may not be true about the stock market: the assumption that the transition probabilities do not change over time, and the assumption that the transition probability depends only on the current state.

59. If \( q \) is a row of \( Q \), then by assumption \( qP = q \). Thus, when we multiply the rows of \( Q \) by \( P \), nothing changes, and \( OP = Q \). 61. At each step, only 0.4 of the population in state 1 remains there, and nothing enters from any other state. Thus, when the first entry in the steady-state distribution vector is multiplied by 0.4 it must remain unchanged. The only number for which this true is 0.

63. An example is

\[ \begin{array}{ccc}
1 & 2 & 3 \\
3 & 4 & 3 \\
4 & 3 & 4
\end{array} \]

65. If \( vP + wP = wP \) then \( (v + w)P = vP + wP = vP + wP = (v + w)P \). Further, if the entries of \( v \) and \( w \) add up to 1, then so do the entries of \( (v + w)/2 \).

**Chapter 7 Review**

1. \( n(S) = 8, \ E = \{HHH, HTH, HTH, HTH, HHT, HTT, TTH, TTT\}, \)

\( P(E) = 7/8 \)

3. \( n(S) = 36, \ E = \{(1, 6), (2, 5), (3, 4), (4, 3), (5, 2), (6, 1)\}; \ P(E) = 1/6 \)

</tbody>
</table>

$P(X \geq 2) = \frac{31}{35} \approx .886$

51. Answers will vary. 53. No; for instance, if $X$ is the number of times you must toss a coin until heads comes up, then $X'$ is infinite but not continuous. 55. By measuring the values of $X$ for a large number of outcomes, and then using the estimated probability (relative frequency) 57. Here is an example: let $X$ be the number of days a diligent student waits before beginning to study for an exam scheduled in 10 days’ time. 59. Answers may vary. If we are interested in exact page-counts, then the number of possible values is very large and the values are (relatively speaking) close together, so using a continuous random variable might be advantageous. In general, the finer and more numerous the measurement classes, the more likely it becomes that a continuous random variable could be advantageous.

Section 8.2

19. $P(X = x)$

21. $P(X \leq 2) = .8889$

</tbody>
</table>

\( E(X) = 16/7 \approx 2.2857 \) tents

53. FastForward: 3.97%; SolidState: 5.51%; SolidState gives the higher expected return.

55. A loss of $29,390

57. (A) 59. He is wrong; for example, the collection 0, 0, 300 has mean 100 and median 0.

61. No. The expected number of times you will hit the dart-board is the average number of times you will hit the bull’s eye per 50 shots; the average of a set of whole numbers need not be a whole number.

63. Wrong. It might be the case that only a small fraction of people in the class scored better than you but received exceptionally high scores that raised the class average. Suppose, for instance, that there are 10 people in the class. Four received 100%, you received 80%, and the rest received 70%. Then the class average is 83%, 5 people have lower scores than you, but only four have higher scores.

65. No; the mean of a very large sample is only an estimate of the population mean. The means of larger and larger samples approach the population mean as the sample size increases.

67. Wrong. The statement attributed to President Bush asserts that the mean tax refund would be $1000, whereas the statements referred to as “The Truth” suggest that the median tax refund would be close to $100 (and that the 31st percentile would be zero).

69. Select a U.S. household at random, and let \( X \) be the income of that household. The expected value of \( X \) is then the population mean of all U.S. household incomes.

Section 8.4

1. \( s^2 = 29; \ s = 5.39 \)

3. \( s^2 = 12.4; \ s = 3.52 \)

5. \( s^2 = 6.64; \ s = 2.58 \)

7. \( s^2 = 13.01; \ s = 3.61 \)

9. \( 1.04 \)

11. 9.43

13. 3.27

15. Expected value = 3.5, variance = 2.918, standard deviation = 1.71

17. Expected value = 1, variance = 0.5, standard deviation = 0.71

19. Expected value = 4.47, variance = 1.97, standard deviation = 1.40

21. Expected value = 2.67, variance = 0.36, standard deviation = 0.60

23. Expected value = 2, variance = 1.8, standard deviation = 1.34

25. \( \mu = 3, \ s = 3.54 \)

61. We must assume that the population distribution is bell-shaped and symmetric.

27. a. \( \bar{x} = 5.0, \ s = 0.6 \)

29. a. \( \bar{x} = 5000, \ s \approx 2211 \)

31. a. 2.18

33. \( \mu = 1.5, \ \sigma = 1.43; 100% \)

35. \( \mu = 40.6, \ \sigma = 26; \ \$52,000 \)

37. \( \mu = 30.2\text{ yrs. old}, \ \sigma = 11.78\text{ yrs} \)

39. At most 6.25%

41. At most; 12.5%

43. a. \( \mu = 25.2, \ \sigma = 3.05 \)

45. a. \( \mu = 780, \ \sigma = 13.1 \)

47. a. \( \mu = 6.5, \ \sigma^2 = 4.0, \ \sigma = 2.0 \)

b. [2.5, 10.5]; 3 checkout lanes

49. \$10,700 or less

51. \$65,300 or more

53. U.S.

57. 16% 59. 0–$76,000

61. \( \mu = 12.56\%), \ \sigma \approx 1.8885\% \)

63. 78%; The empirical rule predicts 68%. The associated probability distribution is roughly bell-shaped but not symmetric.

65. 96%; Chebyshev’s rule is valid, since it predicts that at least 75% of the scores are in this range.

67. (B, D)

69. The sample standard deviation is bigger; the formula for sample standard deviation involves division by the smaller term \( n - 1 \) instead of \( n \), which makes the resulting number larger.

71. The grades in the first class were clustered fairly close to 75. By Chebyshev’s inequality, at least 88% of the class had grades in the range 60–90. On the other hand, the grades in the second class were widely dispersed. The second class had a much wider spread of ability than did the first class.

73. The variable must take on only the value 10, with probability 1.

57. Probability that a person will say Goode = .54. Probability that Goode polls more than 52% \( \approx .8925 \)

59. 23.4

61. When the distribution is normal 63. Neither. They are equal.

65. \( 1/(b - a) \)

67. A normal distribution with standard deviation 0.5, because it is narrower near the mean, but must enclose the same amount of area as the standard curve, and so it must be higher.
Chapter 8 Review

1. Two examples are: 0, 0, 0, 4 and −1, −1, 1, 5

9. An example is −1, −1, −1, 1, 1, 1

11. \( \mu = 0, \sigma = 1.5811; \) within 1.3 standard deviations of the mean.

17. \( \mu = 0, \sigma = 1.5811; \) within 1.4 standard deviations of the mean.

Chapter 9

Section 9.1

1. Vertex: \((-3/2, -1/4);\) y-intercept: 2; x-intercepts: \(-2, -1\)

3. Vertex: (2,0); y-intercept: -4; x-intercept: 2

5. Vertex: \((-20, 900);\) y-intercept: 500; x-intercepts: -50, 10

7. Vertex: \((-1/2, -5/4);\) y-intercept: -1; x-intercepts: \(-1/2 \pm \sqrt{5}/2\)

9. Vertex: (0, 1); y-intercept: 1; 11. \( R = -4p^2 + 100p; \) Maximum revenue when \( p = \$12.50 \)

13. \( R = -2p^2 + 400p; \) Maximum revenue when \( p = \$100 \)

15. \( y = -0.7955x^2 + 4.4591x - 1.6000 \)

17. \( y = -1.1667x^2 - 6.1667x - 3.0000 \)

19. a. Positive because the data suggest a curve that is concave up. b. (C) c. 1995. The parabola rises to the left of the vertex and thus predicts increasing trade as we go back in time, contradicting history.
ANSWERS TO SELECTED EXERCISES

21. 1985 ($t = 15$); 3525 pounds

23. 5000 pounds. The model is not trustworthy for vehicle weights larger than 5000 pounds, because it predicts increasing fuel economy with increasing weight, and 5000 is close to the upper limit of the domain of the function.

25. Maximum revenue when $p = $140, $R = $9800

27. Maximum revenue with 70 houses, $R = $9,800,000

29. a. $q = -560x + 1400; R = -560x^2 + 1400x$
   b. $P = -560x^2 + 1400x - 30; x = $1.25; $P = $845 per month

31. $C = -200x + 620; P = -400x^2 + 1400x - 620$
   $x = $1.75 per log-on; $P = $605 per month

33. a. $q = -10p + 400$  b. $R = -10p^2 + 400p$
   c. $C = -30p + 4200$
   d. $P = -10p^2 + 430p - 4200; p = $21.50

35. $C(t) = 2.71t^2 - 4.5t + 50; $120.2 billion, which agrees with the actual value to the nearest $1 billion.

37. a. $S(t) = -12.27t^2 + 227.23t + 64.39$

b. 986,000 units  c. Mathematical regression cannot reliably be used to make predictions about sales. (Answers will vary.)

39. The $x$-coordinate of the vertex represents the unit price that leads to the maximum revenue, the $y$-coordinate of the vertex gives the maximum possible revenue, the $x$-intercepts give the unit prices that result in zero revenue, and the $y$-intercept gives the revenue resulting from zero unit price (which is obviously zero).

41. Graph the data to see whether the points suggest a curve rather than a straight line. If the curve suggested by the graph is concave up or concave down, then a quadratic model would be a likely candidate. 43. If $q = mp + b$ (with $m < 0$), then the revenue is given by $R = pq = mp^2 + bp$. This is the equation of a parabola with $a = m < 0$, and so is concave down. Thus the vertex is the highest point on the parabola, showing that there is a single highest value for $R$, namely, the $y$-coordinate of the vertex.

45. Because $R = pq$, the demand must be given by $q = \frac{-50p^2 + 60p}{p} = -50p + 60$

37. $2*EXP((1+x) / x)$ or $2*EXP(1/2)$

39. $2*EXP(1/x)$; not $2*EXP(1/x)$; not $2*EXP(1/x)$
growth tapers off because of pressures such as limited resources and overcrowding. 101. Linear functions better: cost models where there is a fixed cost and a variable cost; simple interest, where interest is paid on the original amount invested. Exponential models better: compound interest, population growth. (In both of these, the rate of growth depends on the present number of items, rather than on some fixed quantity.) 103. Take the ratios $y_2/y_1$ and $y_3/y_2$. If they are the same, the points fit on an exponential curve. 105. This reasoning is suspect—the bank need not use its computer resources to update all the accounts every minute, but can instead use the continuous compounding formula to calculate the balance in any account at any time.

### Answers to Selected Exercises

39. 

41.

43.

45.

47. $f(x) = 500(0.5)^x$

49. $f(x) = 10(3)^x$

51. $f(x) = 500(0.5)^x$

53. $f(x) = -100(1.1)^x$

55. $y = 4(3^x)$

57. $y = -(1.2^x)$

59. $y = 2.1213(1.4142^x)$

61. $y = 3.6742(0.9036^x)$

63. $f(t) = 5000e^{0.10t}$

65. $f(t) = 1000e^{-0.063t}$

67. $y = 1.0442(1.7564)^x$

69. $y = 15.735(1.4822)^t$

71. $y = 1000(2^{3/7})$

73. $A(t) = 5000(1.0439)^t$; £6198

75. At the beginning of 2014

77. 31.0 grams, 9.25 grams, 2.76 grams

81. 53 mg

83. a. $P = 40t + 360$ b. $P = 360(1.106)^t$. Neither model applicable.

85. a. $P = 180(1.01121)^t$ million

b. 4 decimal places

87. a. $y = 50,000(1.5^t)$; $t$ = time in years since two years ago

b. 91,856 tags

91. a.

<table>
<thead>
<tr>
<th>Year</th>
<th>1950</th>
<th>2000</th>
<th>2050</th>
<th>2100</th>

<td>669</td>
<td>799</td>
<td>953</td>
</tr>
</tbody>
</table>

b. 2010 ($t = 260$)

93. a. $P(t) = 0.339(1.169)^t$.

95. a. $y = 5.4433(1.0609)^t$.

97. (B) 99. Exponential functions of the form $f(x) = A(b^x)$ ($b > 0$) increase rapidly for large values of $x$. In real-life situations, such as population growth, this model is reliable only for relatively short periods of growth. Eventually, population
base to a power never results in a negative number, so there can be no such real number as the logarithm of a negative number.

71. \( \log_4 y = 14 \) \( \Rightarrow \) \( y = 4^{14} \)

75. \( x \) or \( x^2 \)

77. Any logarithmic curve \( y = \log_b t + C \) will eventually surpass 100%, and hence not be suitable as a long-term predictor of market share. 79. Time is increasing logarithmically with population; Solving \( P = Ab^t \) for \( t \) gives \( t = \log_b(P/A) = \log_b P - \log_b A \), which is of the form \( t = \log_b P + C \).

### Section 9.4

1. \( N = 7, A = 6, b = 2; 7/(1+6 \times 2^{-x}) \)

3. \( N = 10, A = 4, b = 0.3; 10/(1+4 \times 0.3^{-x}) \)

5. \( N = 4, A = 7, b = 1.5; 4/(1+7 \times 1.5^{-x}) \)

7. \( f(x) = \frac{200}{1 + 19(2^{-x})} \)

9. \( f(x) = \frac{6}{1 + 2^x} \)

11. (B) 13. (B) 15. (C)

17. \( y = \frac{7.2}{1 + 2.4(1.05)^x} \)

19. \( y = \frac{97}{1 + 2.2(0.942)^x} \)

21. a. (A) b. 20% per year c. $38,000 d. 14.33(1.05)^x e. N(7) \approx 3463 \) cases f. \( N(t) = \frac{10,000}{1 + 9(1.25)^{-t}} \) g. 3000 \( \frac{1}{1 + 29(21/5)^{-t}} \) h. 6300 articles i. 5200 articles

23. a. 91% b. \( P(x) \approx 14.33(1.05)^x \)

25. \( N(t) = \frac{3000}{1 + 29(21/5)^{-t}} \)

27. \( t = 16 \) days

29. a. \( A(t) = \frac{6.3}{1 + 4.8(1.2)^{-t}} \) b. 6300 articles

b. 5200 articles c. \( N(t) = \frac{82.8}{1 + 21.8(7.14)^{-t}} \). The model predicts that book sales will level off at around 82.8 million books per year. b. Not consistent; 15% of the market is represented by more than double the predicted value. This shows the difficulty in making long-term predictions from regression models obtained from a small amount of data. c. 2001

33. \( N(t) = \frac{5}{1 + 1.080(1.056)^{-t}} \); \( t = 17 \), or 2010. 35. Just as diseases are communicated via the spread of a pathogen (such as a virus), new technology is communicated via the spread of information (such as advertising and publicity). Further, just as the spread of a disease is ultimately limited by the number of susceptible individuals, so the spread of a new technology is ultimately limited by the size of the potential market. 37. It can be used to predict where the sales of a new commodity might level off.

### Chapter 9 Review

21. \( \frac{1}{3} \log 1.05 \)

23. 

25. \( Q = 5e^{-0.00693x} \) 27. \( Q = 2.5e^{0.347x} \) 29. 10.2 years

31. 10.8 years 33. \( f(x) = \frac{900}{1 + 8(1.5)^{-x}} \)

35. \( f(x) = \frac{20}{1 + 3(0.8)^{-x}} \)

37. a. \$8500 per month; an average of approximately 2100 hits per day b. \$29,049 per novel. The fact that \( -0.000005 \), the coefficient of \( c^2 \), is negative. 39. \( R = -60p^2 + 950p; p = 7.92 \) per novel, Monthly revenue = \$3760.42

41. a. 10, 34 b. About 360,000 pounds 43. 2008 45. 32.8 hours 47. (C)
Chapter 10

Section 10.1

1. 0 3 4 5. Does not exist 7. 1.5 9. 0.5 11. Diverges to $+\infty$ 13. 0 15. 1 17. 0 19. a. $-2$ b. $-1$ 21. a. 2 b. 1 c. 0 d. $+\infty$ 23. a. 0 b. 2 c. $-1$ d. Does not exist e. 2 f. $+\infty$ 25. a. 1 b. 1 c. 2 d. Does not exist e. 1 f. 2 27. a. 1 b. $+\infty$ c. $+\infty$ d. $+\infty$ e. not defined f. $-1$ 29. a. $-1$ b. $+\infty$ c. $-\infty$ d. Does not exist e. 2 f. 1 31. 7.0; In the long term, the number of research articles in *Physics Review* written by researchers in Europe approaches 7000 per year. 33. 470. This suggests that students whose parents earn an exceptionally large income score an average of 470 on the SAT verbal test. 35. $\lim_{x\to1} C(t) = 0.06$, $\lim_{x\to1} C(t) = 0.08$, so $\lim_{x\to1} C(t) = 0$ does not exist. 37. $\lim_{x\to+\infty} I(t) = +\infty$, $\lim_{x\to+\infty}\left(\frac{I(t)}{E(t)}\right) \approx 2.5$. In the long term, U.S. imports from China will rise without bound and be 2.5 times U.S. exports to China. In the real world, imports and exports cannot rise without bound. Thus, the given models should not be extrapolated far into the future. 39. $\lim_{x\to+\infty} n(t) \approx 80$. Online book sales can be expected to level off at 80 million per year in the long run. 41. To approximate $\lim_{x\to a} f(x)$ numerically, choose values of $x$ closer and closer to, and on either side of $x = a$, and evaluate $f(x)$ for each of them. The limit (if it exists) is then the number that these values of $f(x)$ approach. A disadvantage of this method is that it may never give the exact value of the limit, but only an approximation. (However, we can make this as accurate as we like.) 43. It is possible for $\lim_{x\to a} f(x)$ to exist even though $f(a)$ is not defined. An example is $\lim_{x\to1} \frac{x^2 - 3x + 2}{x - 1}$.

45. Any situation in which there is a sudden change can be modeled by a function in which $\lim_{x\to a} f(t)$ is not the same as $\lim_{x\to a^-} f(t)$ One example is the value of a stock market index before and after a crash: $\lim_{x\to a} f(t)$ is the value immediately before the crash at time $t = a$, while $\lim_{x\to a^-} f(t)$ is the value immediately after the crash. Another example might be the price of a commodity that has suddenly increased from one level to another. 47. An example is $f(x) = (x - 1)(x - 2)$.

Section 10.2

1. Continuous on its domain 3. Continuous on its domain 5. Discontinuous at $x = 0$ 7. Discontinuous at $x = -1$ 9. Continuous on its domain 11. Discontinuous at $x = -1$ and 0 13. (A), (B), (D), (E) 15. 0 17. -1 19. No value possible 21. -1 23. Continuous on its domain 25. Continuous on its domain 27. Discontinuity at $x = 0$ 29. Discontinuity at $x = 0$ 31. Continuous on its domain 33. Not unless the domain of the function consists of all real numbers. (It is impossible for a function to be continuous at points not in its domain.) For example, $f(x) = 1/x$ is continuous on its domain—the set of nonzero real numbers—but not at $x = 0$. 35. True. If the graph of a function has a break in its graph at any point $a$, then it cannot be continuous at the point $a$.

37. Answers may vary.

Section 10.3

1. $x = 1$ 3. 2 5. 1 7. 2 9. 0 11. 6 13. 4 15. 2 17. 0 19. 0 21. 12 23. Diverses to $+\infty$ 25. Diverges to $+\infty$ 27. 3/2 29. 1/2 31. Diverses to $+\infty$ 33. 0 35. 3/2 37. 1/2 39. Diverses to $-\infty$ 41. 0 43. Discontinuity at $x = 0$ 45. Continuous everywhere 47. Discontinuity at $x = 0$ 49. Discontinuity at $x = 0$ 51. a. 0.49, 1.16. Shortly before 1999, annual advertising expenditures were close to $0.49 billion. Shortly after 1999, annual advertising expenditures were close to $1.16 billion. b. Not continuous; Movie advertising expenditures jumped suddenly in 1999. 53. 1.59; If the trend continues indefinitely, the annual spending on police will be 1.59 times the annual spending on courts in the long run. 55. $\lim_{x\to+\infty} I(t) = +\infty$, $\lim_{x\to+\infty}\left(\frac{I(t)}{E(t)}\right) = 2.5$. In the long term, U.S. imports from China will rise without bound and be 2.5 times U.S. exports to China. In the real world, imports and exports cannot rise without bound. Thus, the given models should not be extrapolated far into the future. 57. $\lim_{x\to+\infty} p(t) = 100$. The percentage of children who learn to speak approaches 100% as their age increases. 59. Yes; $\lim_{x\to+\infty} C(t) = \lim_{x\to+\infty} C(t) = 1.24$. 61. To evaluate $\lim_{x\to a} f(x)$ algebraically, first check whether $f(x)$ is a closed-form function. Then check whether $x = a$ is in its domain. If so, the limit is just $f(a)$; that is, it is obtained by substituting $x = a$. If not, then try to first simplify $f(x)$ in such a way as to transform it into a new function such that $x = a$ is in its domain, and then substitute. A disadvantage of this method is that it is sometimes extremely difficult to evaluate limits algebraically, and rather sophisticated methods are often needed. 63. She is wrong. Closed-form functions are continuous only at points in their domains, and $x = 2$ is not in the domain of the closed-form function $f(x) = 1/(x - 2)^2$. 65. The statement may not be true, for instance, if $f(x) = \begin{cases} x + 2 & \text{if } x < 0 \\ 2x - 1 & \text{if } x \geq 0 \end{cases}$, then $f(0)$ is defined and equals $-1$, and yet $\lim_{x\to0} f(x)$ does not exist. The statement can be corrected by requiring that $f$ be a closed-form function: “If $f$ is a closed form function, and $f(a)$ is defined, then $\lim_{x\to a} f(x)$ exists and equals $f(a)$.” 67. Answers may vary, for example $f(x) = \begin{cases} 0 & \text{if } x \text{ is any number other than } 1 \text{ or } 2 \\ 1 & \text{if } x = 1 \text{ or } 2 \end{cases}$
Section 10.4

25. a. -0.25 million people per year. During the period 2000–2004, employment in the U.S. decreased at an average rate of 0.25 million people per year. b. Zero people per year. During the period 1999–2002 the average rate of change of employment in the U.S. was zero people per year. 27. a. 1998–2000. The number of companies that invested in venture capital each year was increasing most rapidly during the period 1998–2000, when it grew at an average rate of 650 companies per year. b. 1999–2001. The number of companies that invested in venture capital each year was decreasing most rapidly during the period 1999–2001, when it decreased at an average rate of 50 companies per year.

29. a. [3, 5]; -0.25 thousand articles per year. During the period 1993–1995, the number of articles authored by U.S. researchers decreased at an average rate of 250 articles per year. b. Percentage rate ≈ -0.1765, Average rate = -0.09 thousand articles/year. Over the period 1993–2003, the number of articles authored by U.S. researchers decreased at an average rate of 90 per year, representing a 17.65% decrease over that period. 31. a. 75 teams per year b. Decreased 33. a. 250 million transactions per year, -150 million transactions per year, 50 million transactions per year. Over the period January 2000–January 2001, the (annual) number of online shopping transactions in the U.S. increased at an average rate of 250 million per year. From January 2001 to January 2002, this number decreased at an average rate of 150 million per year. From January 2000 to January 2002, this number increased at an average rate of 50 million per year. b. The average rate of change of N(t) over [0, 2] is the average of the rates of change over [0, 1] and [1, 2]. 35. a. (C) b. (A) c. (B) d. Approximately -0.0063 (to two significant digits) billion dollars per year, (−$6,300,000 per year). This is much less than the (positive) slope of the regression line, 0.0125 ≈ 0.013 billion dollars per year, ($13,000,000 per year).

39. The index was increasing at an average rate of 300 points per day. 41. $0.08 per year. The value of the euro in U.S. dollars was growing at an average rate of about $0.08 per year over the period June 2000–June 2004. 43. a. 8.85 manatee deaths per 100,000 boats; 23.05 manatee deaths per 100,000 boats b. More boats result in more manatee deaths per additional boat. 45. a. $305 million per year; Over the period 1997–1999, annual advertising revenues increased at an average rate of $305 million per year. b. (A) c. $590 million per year; The model projects annual advertising revenues to increase by $590 million per year in 2000. 47. a. -0.88, -0.79, -0.69, -0.60, -0.51, -0.42 b. For household incomes between $40,000 and $40,500, the poverty rate decreases at an average rate of 0.69 percentage points per $1000 increase in the median household income. c. (B) d. (B).

49. The average rate of change of f over an interval [a, b] can be determined numerically, using a table of values; graphically, by measuring the slope of the corresponding line segment through two points on the graph; or algebraically, using an algebraic formula for the function. Of these, the least precise is the graphical method, because it relies on reading coordinates of points on a graph.

51. Answers will vary.

67. Note: Answers depend on the form of technology used. Excel \((h = 0.1)\):

Graphs:

The top curve is \( y = f(x) \); the bottom curve is \( y = f'(x) \).

69. \( q(100) = 50,000, q'(100) = -500 \). A total of 50,000 pairs of sneakers can be sold at a price of $100, but the demand is decreasing at a rate of 500 pairs per $1 increase in the price.

71. a. Sales in 2000 were approximately 160,000 pools per year, and increasing at a rate of 6000 per year. b. Decreasing because the slope is decreasing. c. Decreasing at a rate of about $0.10 per year. In January, 2000, the value of the euro was decreasing at a rate of about $0.10 per year. c. The value of the euro was decreasing in January 2000, and then began to increase.

73. a. $305 million per year b. (A) c. $685 million/year. In December 2000, AOL's advertising revenue was projected to be increasing at a rate of $685 million per year. 81. \( A(0) = 4.5 \) million; \( A'(0) = 60,000 \)

83. a. 60% of children can speak at the age of 10 months. At the age of 10 months, this percentage is increasing by 18.2 percentage points per month. b. As \( t \) increases, \( p \) approaches 100 percentage points (all children eventually learn to speak), and \( dp/dt \) approaches zero because the percentage stops increasing. 85. \( S(5) \approx 109, \frac{dS}{dt} \bigg|_{t=5} \approx 9.1 \). After 5 weeks, sales are 109 pairs of sneakers per week, and sales are increasing at a rate of 9.1 pairs per week each week. 87. a. \( P(50) \approx 62, P'(50) \approx 0.96; 62\% \) of U.S. households with an income of $50,000 have a computer. This percentage is increasing at a rate of 0.96 percentage points per $1000 increase in household income. b. \( P' \) decreases toward zero.
89. a. (D)  b. 33 days after the egg was laid  c. 50 days after the egg was laid. Graph:

![Graph of a function with x-axis from 20 to 50 and y-axis from 0 to 2.5.]

91. $L(0.95) = 31.2$ meters and $L'(0.95) = -304.2$ meters/warp. Thus, at a speed of warp 0.95, the spaceship has an observed length of 31.2 meters and its length is decreasing at a rate of 304.2 meters per unit warp, or 3.042 meters per increase in speed of 0.01 warp. 93. The difference quotient is not defined when $h = 0$ because there is no such number as 0/0. 95. The derivative is positive and decreasing toward zero. 97. Company B. Although the company is currently losing money, the derivative is positive, showing that the profit is increasing. Company A, on the other hand, has profits that are declining. 99. (C) is the only graph in which the instantaneous rate of change on January 1 is greater than the one-month average rate of change. 101. The tangent to the graph is horizontal at that point, and so the graph is almost horizontal near that point.

103. Answers may vary.

![Graph of a function with x-axis from 0 to 2 and y-axis from 0 to 2.]

105. If $f(x) = mx + b$, then its average rate of change over any interval $[x, x + h]$ is $\frac{m(x + h) + b - (mx + b)}{h} = m$. Because this does not depend on $h$, the instantaneous rate is also equal to $m$. 107. Increasing because the average rate of change appears to be rising as we get closer to 5 from the left (see the bottom row).

109. Answers may vary

\( b. \) Increasing; the number of manatees killed per additional 100,000 boats increases as the number of boats increases  
\( c. \ f'(8) = 26.6 \) manatees per 100,000 additional boats  
\( d. \) At a level of 800,000 boats, the number of manatee deaths is increasing at a rate of 26.6 manatees per 100,000 additional boats

105. \( c(t) - m(t) \) measures the combined market share of the other three providers (Comcast, Earthlink, and AOL); \( c'(t) - m'(t) \) measures the rate of change of the combined market share of the other three providers.

107. After graphing the curve \( y = 3x^2 \), draw the line passing through \((-1, 3)\) with slope -6.

109. The slope of the tangent line of \( g \) is twice the slope of the tangent line of \( f \).

111. \( g'(x) = -f'(x) \)

113. The left-hand side is not equal to the right-hand side. The derivative of the left-hand side is equal to the right-hand side, so your friend should have written \( \frac{d}{dx}(3x^4 + 11x^2) \).

115. The derivative of a constant times a function is the constant times the derivative of the function, so that \( f'(x) = (2)(2x) = 4x \). Your enemy mistakenly computed the derivative of the constant times the derivative of the function. The derivative of a product of two functions is not the product of the derivative of the two functions. The rule for taking the derivative of a product is discussed in the next chapter.

117. Answers may vary.

Section 10.8

1. \( C'(1000) = 4.80 \) per item

3. \( C'(100) = 99.90 \) per item

5. \( C'(x) = 4; \) \( R'(x) = 8 - x/500; \) \( P'(x) = 4 - x/500; \) \( P'(x) = 0 \) when \( x = 2000 \). Thus, at a production level of 2000, the profit is stationary (neither increasing nor decreasing) with respect to the production level. This may indicate a maximum profit at a production level of 2000.

7. \( a. \) (B) \( b. \) (C) \( c. \) (C)

9. \( a. \ C'(x) = 2250 - 0.04x \). The cost is going up at a rate of \$2,249,840 per television commercial. The exact cost of airing the fifth television commercial is \( C(5) = C(4) = 22,840 \) dollars.

b. \( C(5) = 150x + 2250 - 0.02x \); \( C(4) = 22,87420 \) dollars.

The cost is increasing at a rate of 0.02x dollars per additional item.

11. \( a. \ R'(x) = 0.90; \) \( P'(x) = 0.90 - 0.002x \)

b. Revenue: \$450, Profit: \$80, Marginal revenue: \$0.90, Marginal profit: \$0.20. The total revenue from the sale of 500 copies is \$450. The profit from the production and sale of 500 copies is \$80. Approximate revenue from the sale of the 501st copy is \$90. Approximate loss from the sale of the 501st copy is 20c.

13. The profit is a maximum when you produce and sell 400 copies.

17. \( a. \) \$2.50 per pound  
\( b. \) \( R(q) = 20,000/q^{1.5} \)
c. $R(400) = $1000. This is the monthly revenue that will result from setting the price at $2.50 per pound. $R'(400) = -$1.25 per pound of tuna. Thus, at a demand level of 400 pounds per month, the revenue is decreasing at a rate of $1.25 per pound. d. The fishery should raise the price (to reduce the demand).

19. $P(50) = $350. This means that, at an employment level of 50 workers, the firm's daily profit will increase at a rate of $350 per additional worker it hires.

20. a. (B) b. (B) c. (C) d. The average cost function is always decreasing. Thus, adding an additional item will decrease the average cost. e. Not necessarily. For example, it may be the case that the marginal cost of the 101st item is lower than the marginal cost of the first 100 items (even though the marginal cost is decreasing). Thus, adding this additional item will raise the average cost.

The net cost at this production level is $1710000 per spot. The average cost will decrease as the production level increases.

32. $R(5) = $3375 per day. Thus, at an employment level of 500 pounds per month, the revenue is increasing at a rate of $250 per additional pound of tuna. e. The marginal cost function is the derivative, $C'(x) = 350$. This means that, at an employment level of 400 pounds per month, the marginal cost is $350 per additional pound of tuna. Thus, at a demand level of 400 pounds per month, the average cost function is at a relatively low point at the current production level, and so it would be appropriate to advise the company to maintain current production levels; raising or lowering the production level will result in increasing average costs.

Chapter 10 Review

This means that the reproduction rate of organisms in a culture containing 4000 organisms is declining at a rate of 2500 organisms per hour, per 1000 additional organisms. 83. Oxygen consumption is decreasing at a rate of 1600 milliliters per day. This is due to the fact that the number of eggs is decreasing, because C'(25) is positive. 85. a. c(t) - m(t) represents the combined market share of the other three providers (Comcast, Earthlink, and AOL). m(t)/c(t) represents MSN’s market share as a fraction of the four providers considered. b. \(\frac{d}{dt}\left(\frac{m(t)}{c(t)}\right)\) |\(t=3\) ≈ -0.043 (or -4.3 percentage points) per year. In June, 2003, MSN’s market share as a fraction of the four providers considered was decreasing at a rate of about 0.043 (or 4.3 percentage points) per year. 87. The analysis is suspect, because it seems to be asserting that the annual increase in revenue, which we can think of as \(dR/dt\), is the product of the annual increases, \(dp/dt\) in price, and \(dq/dt\) in sales. However, because \(R = pq\), the product rule implies that \(dR/dt\) is not the product of \(dp/dt\) and \(dq/dt\), but is instead \(dR/dt = \frac{dp}{dt}q + p\cdot\frac{dq}{dt}\). 89. Answers will vary; \(q = -p + 1000\) is one example. 91. Mine; it is increasing twice as fast as yours. The rate of change of revenue is given by \(R'(t) = p'(t)q(t)\) because \(q'(t) = 0\) Thus, \(R'(t)\) does not depend on the selling price \(p(t)\). 93. (A)

1. \((2x + 1)^3 \quad 3. \quad -(x - 1)^{-2} \quad 5. \quad 2(2 - x)^{-3} \quad 7. \quad (2x + 1)^{-0.5} \quad 9. \quad -4(4x - 1)^{-2} \quad 11. \quad -3/(3x - 1)^2 \quad 13. \quad 4(x^2 + 2x)^3(2x + 2) \quad 15. \quad -4x(2x + 2)^{-2} \quad 17. \quad -5(2 - 3)/(x^2 - x + 3)^{-6} \quad 19. \quad -6x/(x^2 + 1)^4 \quad 21. \quad 1.5(0.2x - 4.2)(0.1x^2 - 4.2x + 9.5)^0.5 \quad 23. \quad 4(2x - 0.5x - 0.5)(x^2 - 0.5x)^0.5 \quad 25. \quad -x/\sqrt{x} - x^2 \quad 27. \quad -[(x + 1)(x^2 - 1)]^{-3/2}/(3x - 1)(x + 1) \quad 29. \quad 6.2(3.1x - 2) + 6.2/(3.1x - 2)^3 \quad 31. \quad 2[(6.4x - 1)^2 + (5.4x - 2)^2][12.6(6.4x - 1) + 16.2(5.4x - 2)^2] \quad 33. \quad -2(x^2 - 3x)^{-3}(2x - 3)(1 - x^2)^0.5 - x(x^2 - 3x)^2(1 - x^2)^{-0.5} \quad 35. \quad -56(x^2 + 1)(3x - 1)^3 \quad 37. \quad 3x^2(1 - x^2)/(1 + x^2)^2 \quad 39. \quad 3[(1 + 2x)^2 - (1 - x)^2][8(1 + 2x)^3 + 2(1 - x)] \quad 41. \quad -0.43(x + 1)^{-1/2}[2 + (x + 1)^{-1/2}] + \frac{1}{(2x + 1)^{-1/2}} - 2/x \quad 43. \quad -54(1 + 2x)^3(1 + (1 + 2x)^3)^2 + (1 + (1 + 2x)^3)^2 \quad 47. \quad (100x^{0.99} - 99x^{-0.99})dx/dt \quad 49. \quad (-3r^{-4} + 0.5r^{-0.5})dr/dt \quad 51. \quad 4r^2dr/dt \quad 53. \quad -47/4 \quad 55. \quad 1/3 \quad 57. \quad -5/3 \quad 59. \quad 1/4 \quad 61. \quad y = 35(7 + 0.2x)^{-0.25} - 0.11 percentage points per month.
63. \( \frac{dP}{dn} \bigg|_{n=10} = 146,454.9 \). At an employment level of 10 engineers, Paramount will increase its profit at a rate of $146,454.90 per additional engineer hired. 65. \(-30\) per additional ruby sold. The revenue is decreasing at a rate of $30 per additional ruby sold. 67. \( \frac{dy}{dx} \bigg|_{t=1} = (1.5)(-2) = -3 \) murders per 100,000 residents/yr each year. 69. 0.000158 manatees per boat, or 15.8 manatees per 100,000 boats. Approximately 15.8 more manatees are killed each year for each additional 100,000 registered boats. 71. 12r mi/h 73. \$200,000/yr/week \approx \$628,000/week 75. a. \( q(4) = 333 \) units per month 6b. \( \frac{dR}{dq} = 8800/\text{unit} \) c. \( \frac{dR}{dt} = \approx \$267,000 \) per month 77. 3% per year 79. 8% per year 81. The glob squared, times the derivative of the glob. 83. The derivative of a quantity cubed is three times the original (quantity squared), times the derivative of the quantity. Thus, the correct answer is \( 3(3x^2 - x)^2(9x^2 - 1) \). 85. Following the calculation thought experiment, pretend that you are evaluating the function at a specific value of \( x \). If the last operation you would perform is addition or subtraction, look at each summand separately. If the last operation is multiplication, use the product rule first; if it is division, use the quotient rule first; if it is any other operation (such as raising a quantity to a power or taking a radical of a quantity), then use the chain rule first. 87. An example is \( f(x) = \sqrt{\sqrt{x} + \sqrt{x} + \sqrt{x} + \sqrt{x} + 1} \).

Section 11.3

1. \( 1/(x-1) \)
2. \( 1/(x+2) \)
3. \( 2/(x^2 + 3) \)
4. \( e^{x^3} \)
9. \( -e^{-x} \)
11. \( 4^x \ln 4 \)
13. \( 2^{x^2} - 2x \ln 2 \)
15. \( 1 + \ln x \)
17. \( 2x \ln x + (x^2 + 1)/x \)
19. \( 10(x^2 + 1)^4 \ln x + (x^2 + 1)^5/x \)
21. \( 3/(3x - 1) \)
23. \( 4x/(2x^2 + 1) \)
25. \( (2x - 0.63x^{-0.65})(x^2 - 2.1x^{0.8}) \)
27. \( -2/(2x + 1) + 1/(x + 1) \)
29. \( 3/(3x + 1) - 4/(4x - 2) \)
31. \( 1/(x + 1) + 1/(x - 3) - 2/(2x + 9) \)
33. \( 5.2/(4x - 2) \)
35. \( 2/(x + 1) - 9/(3x - 4) - 1/(x - 9) \)
37. \( \frac{1}{(x + 1)\ln 2} \)
39. \( \frac{1 - 1/\sqrt{2}}{(1 + 1/\sqrt{2}) \ln 3} \)
41. \( \frac{2\ln |x|}{x} \)
43. \( \frac{2 - 2\ln(x - 1)}{x - 1} \)
45. \( e^x(1 + x) \)
47. \( 1/(x + 1) + 3e^x(x^2 + x^3) \)
49. \( e^{(\ln x)/2} + 1/x \)
51. \( 2e^{2x+1} \)
53. \( (2x - 1)e^{x^2 - x + 1} \)
55. \( 2xe^{3x-1}(1 + x) \)
57. \( 4(e^{x+2})^2 \)
59. \( 2 \cdot 3^{2x+1} \ln 3 \)
61. \( 2 \cdot 3^{2x+1} \ln 3 + 3e^{3x+1} \)
63. \( 2x^3(2x + 1)\ln 3 - 1 \)
65. \(-4/(e^x - e^{-x})^2 \)
67. \( 5e^{3x} \)
69. \( \frac{1}{2x^2 \ln x} \)
71. \( 73. \frac{1}{x \ln x} \)
75. \( \frac{1}{2x \ln x} \)
77. \( y = (e/\ln 2)(x - 1) \approx 3.92(x - 1) \)
79. \( y = x \)
81. \( y = -\frac{1}{(2Ce)}(x - 1) - e \)
83. Average price: $1.4 million; increasing at a rate of about $220,000 per year. 85. $451.00 per year 87. $446.02 per year 89. 300 articles per year 91. 3,300,000 cases/week; 11,000,000 cases/week; 640,000 cases/week 93. 310 articles per year 95. 277,000 people/yr 97. 0.000283 g/yr 99. a. (A) b. The verbal SAT increases by approximately 1 point. c. \( S'(x) \) decreases with increasing \( x \), so that as parental income increases, the effect on SAT scores decreases. 101. a. \(-6.25 \) years/child; When the fertility rate is 2 children per woman, the average age of a population is dropping at a rate of 6.25 years per one-child increase in the fertility rate. 103. a. \( W(t) = \frac{1500(0.77(1.16)^t - (1 - \ln(1.16))}{(1 + 0.77(1.16)^{-t})^2} \)
\( \approx \frac{171.425(1.16)^{-t}}{(1 + 0.77(1.16)^{-t})^2} \); \( W(6) \approx 40.624 \approx 41 \) to two significant digits. The constants in the model are specified to two and three significant digits, so we cannot expect the answer to be accurate to more than two digits. In other words, all digits from the third on are probably meaningless. The answer tells one that in 1996, the number of authorized wiretaps was increasing at a rate of approximately 41 wiretaps per year. b. (A) Graph: 105. a. \[ p'(10) \approx 0.09, \text{ so the percentage of firms using numeric control is increasing at a rate of } 9 \text{ percentage points per year after } 10 \text{ years.} \]
107. \( R(t) = 350e^{-0.9t}(39 + 68) \text{ million dollars;} \]
\( R(2) \approx \$42 \text{ billion; } R(2) \approx \$7 \text{ billion per year} \)
109. \( e \) raised to the glob, times the derivative of the glob. 111. 2 raised to the glob, times the derivative of the glob, times the natural logarithm of 2. 113. The power rule does not apply when the exponent is not constant. The derivative of 3 raised to a quantity is 3 raised to the quantity, times the derivative of the quantity, times ln 3. Thus, the correct answer is \( 3^2 \cdot 2 \ln 3 \). 115. No. If \( N(t) \) is exponential, so is its derivative. 117. If \( f(x) = e^{kx} \), then the fractional rate of change is \( \frac{f'(x)}{f(x)} = \frac{ke^{kx}}{e^{kx}} = k \), the fractional growth rate. 119. If \( A(t) \) is growing exponentially, then \( A(t) = Ae^{kt} \) for constants \( A_0 \) and \( k \). Its percentage rate of change is then \( \frac{A'(t)}{A(t)} = \frac{kAe^{kt}}{A_0 e^{kt}} = k \), a constant.
Section 11.4
1. \(-2\)\(\frac{3}{5}\)

b. \(y = -2x\)  
35. a. \(-1\)  
b. \(y = -x + 1\)  
37. a. \(-2000\)  
b. \(y = -2000x + 6000\)  
39. a. \(0\)  
b. \(y = 1\)  
41. a. \(-0.1898\)  
b. \(y = -0.1898x + 1.4721\)  
43. \(2x + 1\)  
\[\frac{2x + 1}{2x + 1} = \frac{2x + 1}{4x - 2}\]  
45. \((3x + 1)^2\)  
\[\frac{6}{4x(2x - 1)^3} \left[ \frac{3x + 1}{2x - 1} \right]^2 \right]\]  
47. \((8x - 1)^{\frac{1}{2}}(x - 1)\)  
\[\frac{8}{(8x - 1)^{\frac{1}{2}}(x - 1)} \left[ \frac{3(8x - 1)^{\frac{1}{2}}}{1} \right] \right]\]  
49. \((x^3 + x)^\frac{1}{2}\)  
\[\left[ \frac{3x^2 + 1}{2x^3 + 2} \right] \right]\]  
51. \(x^3(1 + \ln x)\)  
53. \(-3000\) per worker. The monthly budget to maintain production at the fixed level \(P\) is decreasing by approximately \$3000 per additional worker at an employment level of 100 workers and a monthly operating budget of \$200,000.  
55. \(-125\) T-shirts per dollar; when the price is set at \$5, the demand is dropping by 125 T-shirts per \$1 increase in price.  
57. \(\frac{dy}{dx}_{x=15} = -0.307\) carpenters per electrician. This means that, if a \$200,000 house whose construction employs 15 electricians, adding one more electrician would cost as much as approximately \(0.307\) additional carpenters. In other words, one electrician is worth approximately \(0.307\) carpenters.  
59. a. 22.93 hours. (The other root is rejected because it is larger than 30.) b. \(\frac{dt}{dx} = \frac{4t - 20x}{0.44 - 4x};\) \(\frac{dt}{dx}\) \(\approx -11.2\) hours per grade point. This means that, for a 3.0 student who scores 80 on the examination, 1 grade point is worth approximately 11.2 hours.  
61. \(\frac{dy}{dx} = \frac{3r^2 - 2}{y};\) \(\frac{dy}{dx}\) \(= \frac{3r^2 - 2}{y};\) by the chain rule.  
63. \(x, y, x, y, x\)  
65. Then \(\ln y = \ln f(x) + \ln g(x), \) and \(\frac{1}{y} \frac{dy}{dx} = \frac{f'(x) + g'(x)}{f(x) g(x)}.\)  
so \(\frac{dy}{dx} = y \left[ \frac{f'(x) + g'(x)}{f(x) g(x)} \right] = f(x)g(x) + g(x)f(x) = f'(x)g(x) + f(x)g'(x)\).  
67. Writing \(y = f(x)\) specifies \(y\) as an explicit function of \(x.\) This can be regarded as an equation giving \(y\) as an implicit function of \(x.\) The procedure of finding \(dy/dx\) by implicit differentiation is then the same as finding the derivative of \(y\) as an explicit function of \(x: we take d/dx of both sides.\)  
69. Differentiate both sides of the equation \(y = f(x)\) with respect to \(y\) to get \(1 = f'(x) \cdot \frac{dx}{dy},\) giving \(\frac{dx}{dy} = \frac{1}{f'(x)} = \frac{1}{dy/dx}.\)
57. Answers will vary.

59. Answers will vary.

61. Not necessarily; it could be neither a relative maximum nor a relative minimum, as in the graph of \( y = x^3 \) at the origin.

63. Answers will vary.

### Section 12.2

1. \( x = y = 5; \ P = 25 \)  
3. \( x = y = 3; \ S = 6 \)  
5. \( x = 2, y = 4; \ F = 20 \)  
7. \( x = 20, y = 10, z = 20; \ P = 4000 \)  
9. \( 5 \times 5 \)  
11. 5000 MP3 players, giving an average cost of $30 per MP3 player  
13. \( \sqrt{20} \approx 6.32 \) pounds of pollutant per day, for an average cost of about $1265 per pound  
15. 2.5 lb  
17. \( 5 \times 10 = 50 \) square feet  
19. $10  
21. $30  
23. a. $1.41 per pound  
b. 5000 pounds  
c. $7071.07 per month  
25. 34.5¢ per pound, for a weekly profit of $408.33  
29. a. 656 headsets, for a profit of $28,120  
b. $143 per headset  
31. \( 13 \frac{1}{2} \) in \( \times 3 \frac{3}{4} \) in \( \times 1 \frac{1}{2} \) in for a volume of 1600/27 \( \approx 59 \) cubic inches  
33. \( 5 \times 5 \times 5 \) cm  
35. \( l = w = h \approx 20.67 \) in, volume \( \approx 8827 \) in\(^3\)  
37. \( l = 36 \) in, \( w = h = 18 \) in, \( V = 11,664 \) in\(^3\)  
41. a. 1.6 years, or year 2001.6  
b. \( R_{\text{max}} = 28,241 \) million  
43. \( t = 2.5 \) or midway through 1972; \( D(2.5)/S(2.5) \approx 4.09 \) The number of new (approved) drugs per $1 billion of spending on research and development reached a high of around 4 approved drugs per $1 billion midway through 1972.  
45. 30 years from now  
47. 55 days  
49. 1600 copies. At this value of \( x \), average profit equals marginal profit; beyond this the marginal profit is smaller than the average.  
51. Increasing most rapidly in 1992; increasing least rapidly in 1980  
53. Maximum when \( t = 17 \) days. This means that the embryo’s oxygen consumption is increasing most rapidly 17 days after the egg is laid.  
55. \( h = r \approx 11.7 \) cm  
57. 25 additional trees  
59. 71 employees  
61. Fourth quarter of 2003 (\( t = 3.7 \)); 160 thousand iPods per quarter  
63. Graph of derivative:

Absolute minimum occurs at approximately \( t = 6 \), with value approximately \(-0.0067 \). The fraction of bottled water sales due to sparkling water was decreasing most rapidly in 1996. At that time it was decreasing at a rate of 0.67 percentage points per year.  
65. You should sell them in 17 years’ time, when they will be worth approximately $3960.  
67. (D) 69. The problem is uninteresting because the company can accomplish the objective by cutting away the entire sheet of cardboard, resulting in a box with surface area zero.  
71. Not all absolute extrema occur at stationary points; some may occur at an endpoint or singular point of the domain, as in Exercises 23, 24, 51 and 52.  
73. The minimum of \( dq/dp \) is the fastest that the demand is dropping in response to increasing price.

### Section 12.3

1. \( 6 \)  
3. \( 4/x^3 \)  
5. \( -0.96x^{-1.6} \)  
7. \( e^{-(x-1)} \)  
9. \( 2/x^3 + 1/x^2 \)  
11. \( a = -32 \) ft/sec\(^2\)  
b. \( a = -32 \) ft/sec\(^2\)  
13. \( a = 2/t^3 + 6/t^4 \) ft/sec\(^2\)  
b. \( a = 8 \) ft/sec\(^2\)  
15. \( a = -1/(4t^{3/2}) + 2 \) ft/sec\(^2\)  
b. \( a = 63/32 \) ft/sec\(^2\)

19. (1, 0)  
21. None  
23. (−1, 0), (1, 1)  
25. Points of inflection at \( x = -1 \) and \( x = 1 \)  
27. One point of inflection, at \( x = -2 \)  
29. Points of inflection at \( x = -2, x = 0, x = 2 \)  
31. Points of inflection at \( x = -2 \) and \( x = 2 \)  
33. Absolute min at (−1, 0); no points of inflection  
35. Relative max at (−2, 21); relative min at (1, −6); point of inflection at (−1/2, 15/2)  
37. Absolute min at (−4, −16) and (2, −16); absolute max at (−2, 16) and (4, 16); point of inflection at (0, 0)  
39. Absolute min at (0, 0); points of inflection at (1/3, 11/324) and (1, 1/12)  
41. Relative min at (−2, 5/3) and (2, 5/3); relative max at (0, −1); vertical asymptotes: \( y = x = \pm 1 \)  
43. Relative min at (1, 2); relative max at (−1, −2); vertical asymptote: \( y = 0 \)
45. Relative maximum at \((-2, -1/3); \) relative minimum at \((-1, -2/3); \) no points of inflection.

47. No extrema; points of inflection at \((0, 0), (3, -9/4), \) and \((3, 9/4)\).

49. Absolute min at \((1, 1); \) vertical asymptote at \(x = 0\).

51. No relative extrema; point of inflection at \((1, 1)\) and \((-1, 1); \) vertical asymptote at \(x = 0\).

53. Absolute min at \((0, 1), \) absolute max at \((1, e - 1), \) relative max at \((-1, 1 + e^{-1})\).

55. Absolute min at \((1.40, -1.49); \) points of inflection: \((0.21, 0.61), (0.79, -0.55)\).

57. Relative min at \((-0.46, 0.73); \) relative max at \((0.91, 1.73); \) absolute min at \((3.73, -10.22); \) points of inflection at \((0.20, 1.22)\) and \((2.83, -5.74)\).

59. \(-3.8 \text{ m/s}^2\)

61. \(6t - 2 \text{ ft/s}^2; \) increasing.

63. Accelerating by 34 million gals/yr²

65. a. 400 ml b. 36 ml/day c. \(-1 \text{ ml/day}^2\)

67. a. Two years into the epidemic. b. Two years into the epidemic.

71. Concave up for \(8 < t < 20, \) concave down for \(0 < t < 8, \) point of inflection around \(t = 8.\) The percentage of articles written by researchers in the U.S. was decreasing most rapidly at around \(t = 8\) (1991).

73. a. (B) b. (B) c. (A)

75. a. There are no points of inflection in the graph of \(S. \) b. Because the graph is concave up, the derivative of \(S\) is increasing, and so the rate of decrease of SAT scores with increasing numbers of prisoners is diminishing. In other words, the apparent effect of more prisoners is diminishing.

77. a. \( \left. \frac{d^2n}{ds^2} \right|_{s=3} = -21.494. \) Thus, for a firm with annual sales of \$3 million, the rate at which new patents are produced decreases with increasing firm size. This means that the returns (as measured in the number of new patents per increase of \$1 million in sales) are diminishing as the firm size increases.

b. \( \left. \frac{d^2n}{ds^2} \right|_{s=7} = 13.474. \) Thus, for a firm with annual sales of \$7 million, the rate at which new patents are produced increases with increasing firm size by 13.474 new patents per \$1 million increase in annual sales. c. There is a point of inflection when \(s \approx 5,458,700, \) so that in a firm with sales of \$5,458,700 per year, the number of new patents produced per additional \$1 million in sales is a minimum.

79. Concave down; (C). Graph:

81. About \$570 per year, after about 12 years

83. Increasing most rapidly in 17.64 years, decreasing most rapidly now (at \(t = 0\)).

85. Nonnegative

87. Daily sales were decreasing most rapidly in June, 2002.

89. At a point of inflection, the graph of a function changes either from concave up to concave down, or vice versa. If it changes from concave up to concave down, then the derivative changes from increasing to decreasing, and hence has a relative maximum. Similarly, if it changes from concave down to concave up, the derivative has a relative minimum.

Section 12.4

1. \(P = 10,000; \) \( \frac{dP}{dt} = 1000 \) 3. Let \(R\) be the annual revenue of my company, and let \(q\) be annual sales. \(R = 7000\) and \(\frac{dR}{dt} = 700. \) Find \(\frac{dq}{dt}. \) 5. Let \(p\) be the price of a pair of shoes, and let \(q\) be the demand for shoes. \(\frac{dp}{dt} = 5. \) Find \(\frac{dq}{dt}. \) 7. Let \(T\) be the average global temperature, and let \(q\) be the number of Bermuda shorts sold per year. \(T = 60\) and \(\frac{dT}{dt} = 0.1. \) Find \(\frac{dq}{dt}. \) 9. \(6/(100\pi) \approx 0.019 \text{ km/sec} \) b. \(6/(8\sqrt{\pi}) \approx 0.4231 \text{ km/sec} \) 11. \(3/(4\pi) \approx 0.24 \text{ ft/min} \)
13. Decreasing at a rate of $1.66 per player per week.
17. Monthly sales will drop at a rate of 26 T-shirts per month.
19. Raise the price by 3¢ per week.
21. The daily operating budget is dropping at a rate of $2.40 per year.
23. The price is decreasing at a rate of approximately 31¢ per pound per month.
25. $2300/\sqrt{4100} \approx 36$ miles/hour.
27. 10.7 ft/sec
29. The y-coordinate is decreasing at a rate of 16 units per second.
31. $1814$ per year.
33. Their prior experience must increase at a rate of approximately 0.97 years every year.

\[ \frac{2500}{0.25\pi} \left( \frac{3}{5000} \right)^{2/3} \approx 0.63 \text{ m/sec} \]

35. \[ \sqrt{\frac{1 + 128\pi}{4\pi}} \approx 1.6 \text{ cm/sec} \]
39. 0.5137 computers per household, and increasing at a rate of 0.0230 computers per household per year.
41. The average SAT score was 904.71 and decreasing at a rate of 0.11 per year.
43. Decreasing by 2 percentage points per year.
45. The section is called "related rates" because the goal is to compute the rate of change of a quantity based on a knowledge of the rate of change of a related quantity.

47. Answers may vary: A rectangular solid has dimensions 2 cm x 5 cm x 10 cm, and each side is expanding at a rate of 3 cm/second. How fast is the volume increasing? 51. Linear
53. Let \( x = \) my grades and \( y = \) your grades. If \( dx/dt = 2 dy/dt \), then \( dy/dt = (1/2) dx/dt \).

**Section 12.5**

1. \( E = 1.5 \); the demand is going down 1.5% per 1% increase in price at that price level; revenue is maximized when \( p = 25 \); weekly revenue at that price is $12500.
3. a. \( E = 6/7 \); the demand is going down 6% per 7% increase in price at that price level; thus a price increase is in order. b. Revenue is maximized when \( p = 100/3 \approx 33.33 \). Demand would be \((100 - 100/3)^2 = (200/3)^2 \approx 4444 \) cases per week.
5. a. \( E = (4p - 33)/(-2p + 33) \) b. 0.54; The demand for \( E = mc^2 \) T-shirts is going down by about 0.54% per 1% increase in price.
7. a. \( E = 1.81 \). Thus, the demand is elastic at the given tuition level, showing that a decrease in tuition will result in an increase in revenue.
9. a. \( E = 51 \); the demand is going down 51% per 1% increase in price at that price level; thus a large price decrease is advised.

b. Revenue is maximized when \( p = 0.50 \). c. Demand would be \( 100e^{-3/4} \approx 78 \) paint-by-number sets per month.
11. a. \( E = -\frac{mp}{b} \) b. \( p = -\frac{b}{2m} \)
13. a. \( E = r \)

b. \( E \) is independent of \( p \). c. If \( r = 1 \), then the revenue is not affected by the price. If \( r > 1 \), then the revenue is always elastic, while if \( r < 1 \), the revenue is always inelastic. This is an unrealistic model because there should always be a price at which the revenue is a maximum.
15. a. \( q = -1500p + 6000 \)
17. At a family income level of $20,000, the fraction of children attending a live theatrical performance is increasing by 0.77% per 1% increase in household income.
19. a. \( E \approx 0.46 \). The demand for computers is increasing by 0.46% per 1% increase in household income. b. \( E \) decreases as income increases. c. Unreliable; it predicts a likelihood greater than 1 at incomes of $123,000 and above. In a more appropriate model, one would expect the curve to level off at or below 1.

d. \( E \approx 0 \)
21. \( \frac{dQ}{Q} = \beta \). An increase in income of \( x \) will result in an increase in demand of \( \beta x \% \).

23. a. \( q = 1000e^{-0.30p} \)
25. a. \( q = 1000e^{-0.30p} \)

\[ Y \cdot \frac{dQ}{dY} = \beta \cdot Y \] For a stationary point, \( dR/dp = 0 \), and so \( q + p \frac{dq}{dp} = 0 \). Rearranging this result gives \( p \frac{dq}{dp} = -q \), and hence \( \frac{dQ}{dY} \cdot \frac{dY}{q} = 1 \), or \( E = 1 \), showing that stationary points of \( R \) correspond to points of unit elasticity.
29. The distinction is best illustrated by an example. Suppose that \( q \) is measured in weekly sales and \( p \) is the unit price in dollars. Then the quantity \( dq/dp \) measures the drop in weekly sales per $1 increase in price. The elasticity of demand \( E \), on the other hand, measures the percentage drop in sales per one percent increase in price. Thus, \( dq/dp \) measures absolute change, while \( E \) measures fractional, or percentage, change.

**Chapter 12 Review**

1. Relative max: \((-1, 5)\), Absolute min: \((-2, -3)\) and \((1, -3)\)
3. Absolute max: \((-1, 5)\), Absolute min: \((1, -3)\)
5. Absolute min: \((1, 0)\)
7. Absolute min: \((-2, -1/4)\)
9. Relative max at \( x = 1 \), point of inflection at \( x = -1 \)
11. Relative max at \( x = -2 \), relative min at \( x = 1 \), point of inflection at \( x = -1 \)
13. One point of inflection, at \( x = 0 \)
15. a. \( a = 4/r^4 - 2/r^3 \text{m/sec}^2 \) b. \( 2 \text{m/sec}^2 \)
17. Relative max: \((-2, 16)\); absolute min: \((2, -16)\); point of inflection: \((0, 0)\); no horizontal or vertical asymptotes
19. Relative min: \((-3, -2/9)\); relative max: \((3, 2/9)\); inflection: \((-3\sqrt{2}, -5\sqrt{2}/36)\), \((3\sqrt{2}, 5\sqrt{2}/36)\); vertical asymptote: \( x = 0 \); horizontal asymptote: \( y = 0 \)
21. Relative max at (0,0), absolute min at (1, -2), no asymptotes

\[ f(x) = \frac{2p^2 - 33p}{-p^2 + 33p + 9} \]

23. \$22.14 per book  25. \$24 per copy  27. For maximum revenue, the company should charge \$22.14 per copy. At this price, the cost is decreasing at a linear rate with increasing price, while the revenue is not decreasing (its derivative is zero). Thus, the profit is increasing with increasing price, suggesting that the maximum profit will occur at a higher price.

\[ E = \begin{cases} 
2 \text{ per book} & \text{for } 1 \leq x < 3, \\
3 \text{ per book} & \text{for } 3 \leq x, \\
4 \text{ per book} & \text{for } 7 \leq x, \\
5 \text{ per book} & \text{for } x > 7. 
\end{cases} \]

29. \( E = \begin{cases} 
2 \text{ per book} & \text{for } 1 \leq x < 3, \\
3 \text{ per book} & \text{for } 3 \leq x, \\
4 \text{ per book} & \text{for } 7 \leq x, \\
5 \text{ per book} & \text{for } x > 7. 
\end{cases} \)

The demand is dropping at a rate of 6% per 1% increase in the price. 35. Week 5 37. 10,500. If weekly sales continue as predicted by the model, they will level off at around 10,500 books per week in the long-term.

9. \( f(x) = \frac{2x^3}{3} + C \)
11. \( -x^4/4 + C \)
13. \( x^3/3 - x^{-3}/3 + C \)
15. \( u^3/3 - \ln |u| + C \)
17. \( 2x^{3/2} + C \)
19. \( 3x^5/5 + 2x^{-1} - x^{-4} + 4x + C \)
21. \( 2 \ln |u| + u^7/8 + C \)
23. \( \ln |x| - \frac{x}{x^2 + C} \)
25. \( 3x^{1/1}/1.1 - x^{5/3}/5.3 - 4.1x + C \)
27. \( 0.3 + \frac{40}{x^8} + C \)
29. \( 2.55x^2 - 1.2 \ln |x| - \frac{15}{x^2} + C \)
31. \( 2e^{-x} + 5 \ln |x| + x/4 + C \)
33. \( 12.2x^{0.5} + x^{1.5}/9 - e^{-x} + C \)
35. \( \frac{2}{3}x + \frac{3}{10}e^{1/2} + C \)
37. \( \ln |1|/10 + C \)
39. \( -1/x^2 + 1 + 2 \)
41. \( f(x) = x^2 + 1 \)
43. \( f(x) = e^x - x + 1 \)
45. \( C(x) = 5x - x^2/20,000 + 20,000 \)
47. \( C(x) = 5x + x^2 + \ln x + 994 \)
49. \( a. x = t^3/3 + t + 1 \)
51. \( \frac{302}{3} \text{ ft/sec} \)
53. \( u(t) = -32t + 16 \)
55. \( \sqrt[3]{2} \approx 1.414 \) as far
57. \( I(t) = 30,000 + 1000t; I(13) = 54,000 \)
59. \( \text{at } t = 0 \text{ sec s is } 189 \text{ feet above the top of the tower.} \)
61. \( \sqrt[3]{2} \approx 1.414 \) as fast
63. \( H(t) = 3.5t + 65 \text{ billion dollars per year} \)
65. \( b. H(t) = 1.75t^3 + 65t + 700 \text{ billion dollars} \)
67. \( S(t) \approx 17/3 \text{ ft} + 50r^2 + 2300r - 7503 \text{ million gallons.} \)

Approximately 43,000 million gallons. 69. They differ by a constant, \( G(x) - F(x) = \text{Constant} \)
71. Antiderivative, marginal 73. \( \int f(x) \, dx \) represents the total cost of manufacturing \( x \) items. The units of \( \int f(x) \, dx \) are the product of the units of \( f(x) \) and the units of \( x \). 75. \( \int f(x) + g(x) \, dx \) is, by definition, an antiderivative of \( f(x) + g(x) \). Let \( F(x) \) be an antiderivative of \( f(x) \) and let \( G(x) \) be an antiderivative of \( g(x) \). Then, because the derivative of \( F(x) + G(x) \) is \( f(x) + g(x) \) (by the rule for sums of derivatives), this means that \( F(x) + G(x) \) is an antiderivative of \( f(x) + g(x) \). In symbols, \( \int f(x) + g(x) \, dx = F(x) + G(x) + C = \int f(x) \, dx + \int g(x) \, dx \), the sum of the indefinite integrals.

77. \( \int x \cdot 1 \, dx = \int x \, dx = x^2/2 + C \), whereas \( \int x \cdot 1 \, dx = (x^2/2 + D) \cdot (x + E) \), which is not the same as \( x^2/2 + C \), no matter what values we choose for the constants \( C, D \) and \( E \). 79. If you take the derivative of the indefinite integral of \( f(x) \), you obtain \( f(x) \) back. On the other hand, if you take the indefinite integral of the derivative of \( f(x) \), you obtain \( f(x) + C \).

Section 13.2

1. \( (3x - 5)^3/12 + C \)
3. \( (3x - 5)^2/12 + C \)
5. \( -e^{-x^2} + C \)
7. \( -e^{-x^2} + C \)
9. \( \int \left( \frac{dx}{x^2 + 1} \right)^2 + C \)
11. \( (3x + 1)^2/18 + C \)
13. \( -2x + 2)^3/2 + C \)
15. \( 1.6(3x - 4)^3/2 + C \)
17. \( e^{0.6x^2} + C \)
19. \( (3x^2 + 3)^2/4 + C \)
21. \( 2x^1/1 + 4.6 + C \)
23. \( x + 3x^{3/2} - 2 + C \)
25. \( 2(3x^2 - 1)^3/2 + 9 + C \)
27. \( -(1/2)e^{-x^2} + C \)
29. \( -(1/2)e^{-x^2} + C \)
31. \( (x^2 + x + 1)^2/2 + C \)
33. \( (2x^3 + x^6 - 5)^1/2 + C \)
35. \( (x - 2)^3/7 + (x - 2)^3/3 + C \)
37. \( (x + 1)^3/2 - (x - 1)^3/3 + C \)
39. \( 20 \ln |1 - e^{-0.05x}| + C \)
41. \( 3e^{-1/1} + C \)
43. \( e^{-x^2}/2 + C \)
45. \( \ln(e^x + e^{-x}) + C \)
47. \( e^{x^2 - 2x + 2} \) \( e^{x^2} + C \)
53. \( -e^{-x} + C \)
55. \( (1/e)e^{-2x^2} + C \)
57. \( (2x + 4)^3/6 + 6 \)
59. \( (1/5) \ln |5x - 1| + C \)
61. \( (1.5x)^3/4 + 6 \)
53. \( (1/2)(x^{3/2} + 4x^2 + 1) \)
65. \( 2^{3x^4 + 1} - 2^{-3x^4} + C \)

89. \( f(x) = (x^2 + 1)^3/8 - 1/8 \)
91. \( C(x) = 5x - 1/(x + 1) + 995.5 \)
93. \( a. N(t) = 35 \ln(5 + e^{0.2t} - 63 \) b. 80,000 articles
95. \( a. x = (t^2 + 1)^2/10 + t^2/2 + C \)
97. \( C = 9/10; x = (t^2 + 1)^2/10 + t^2/2 + 9/10 \)
99. \( S(t) = \frac{17}{3} (t - 1990)^2 + 50(t - 1990)^3 + 2300(t - 1990) - 7530 \text{ million gallons.} \)

Answers to Selected Exercises A57

25. 112.5. This represents your total profit for the week, $112.50.  
27. a. The area represents the accumulated U.S. trade deficit with China (total excess value of imports over exports) for the 8-year period 1996–2004. b. 640. The U.S. accumulated a $640 billion trade deficit with China over the period 1996–2004.  
29. a. $3600 billion. b. This is the area of the region between the graphs of \(P(t)\) and \(I(t)\) for \(10 \leq t \leq 20\).  
31. The area between the export and import curves represents Canada’s accumulated trade surplus (that is, the total excess of exports over imports) from January, 1997 to January, 2001.  
33. (A)  
35. The claim is wrong because the area under a curve can only represent income if the curve is a graph of income per unit time. The value of a stock price is not income per unit time—the income can only be realized when the stock is sold, and it amounts to the current market price. The total net income (per share) from the given investment would be the stock price on the date of sale minus the purchase price of $40.

### Section 14.3

1. Average = 2  
3. Average = 1  
5. Average = \((1 - e^{-2})/2\)  
7. \(\begin{array}{c|cccccc}

33. a.  

\(\begin{array}{c|cccccc}
   \hline
   Spending & 500 & 700 & 900 & 1100 & 1300 & 1500 \\
   Moving Average & 100 & 200 & 300 & 400 & 500 & 600 \\
   \end{array}\)
b. $31 billion per year; Public spending on health care in the U.S. was increasing at a rate of approximately $31 billion per year during the given period.

35. a. 4300 million gallons per year
b. \( \frac{1}{2} \left[ 17 \left( t^3 - (t - 2)^3 \right) + 50t^2 - (t - 2)^2 \right] + 4600 \)
c. Quadratic 37. a. \( s = 14.4t + 240 \)
b. \( \bar{a}(t) = 14.4t + 211.2 \) c. The slope of the moving average is the same as the slope of the original function.

40. \( \bar{f}(x) = mx + b - \frac{ma}{2} \)

Section 14.5
1. Diverges 3. Converges to 2e 5. Converges to \( e^2 \)
7. Converges to \( \frac{1}{2} \) 9. Converges to \( \frac{1}{108} \) 11. Converges to \( 3 \times 5^{2/3} \) 13. Diverges 15. Diverges 17. Converges to \( \frac{5}{4} (3^{4/5} - 1) \) 19. Diverges 21. Converges to 0

23. Diverges 25. Diverges 27. \( 870 million \) 29. 7100 billion cigarettes 31. No; You will not sell more than 2000 of them. 33. The integral diverges, and so the number of graduates each year will rise without bound. 35. a. \( R(t) = 350e^{-0.1t} \) (39t + 68) million dollars/yr; b. \( 1,603,000 \) million 37. \$27,000 billion 39. \( \int_0^\infty N(t) \, dt \) diverges, indicating that there is no bound to the expected future total online sales of books. 40. \( N(t) \, dt \) converges to approximately 1.889, indicating that total online sales of books prior to 1997 amounted to approximately 1.889 million books 41. 1 43. 0.1587

45. \$70,833 47. a. 2.468 meters on average b. The integral diverges. We can interpret this as saying that the number of impacts by meteors smaller than 1 megaton is very large. (This makes sense because, for example, this number includes meteors no larger than a grain of dust.) 49. a. \( \Gamma(1) = 1; \Gamma(2) = 1 \)

51. The integral does not converge, so the number given by the FTC is meaningless. 53. Yes; the integrals converge to 0, and the FTC also gives 0. 55. In all cases, you need to rewrite the improper integral as a limit and use technology to evaluate the integral of which you are taking the limit. Evaluate for several values of the endpoint approaching the limit. In the case of an integral in which one of the limits of integration is infinite, you may have to instruct the calculator or computer to use more subdivisions as you approach \( +\infty \).

Section 14.6
1. \( y = \frac{x^3}{3} + \frac{2x^{3/2}}{3} + C \) 3. \( y^2 = \frac{x^2}{2} + C \) 5. \( y = Ae^{x^2/2} \)
7. \( y = -\frac{2}{(x+1)^2} + C \) 9. \( y = \pm \sqrt{(\ln x)^2 + C} \)
11. \( y = \frac{x^4}{4} - x^2 + 1 \) 13. \( y = (x^3 + 8)^{1/3} \) 15. \( y = 2x \)
17. \( y = e^{x^2/2} - 1 \) 19. \( y = -\frac{2}{\ln(x^2 + 1) + 2} \)
21. With \( s(t) \) = monthly sales after \( t \) months, \( \frac{ds}{dt} = -0.05s \); \( s = 1000 \) when \( t = 0 \). Solution: \( s = 1000e^{-0.05t} \) quarts per month. 23. \( H(t) = 75 + 115e^{-0.0427t} \) degrees Fahrenheit after \( t \) minutes. 25. With \( S(t) \) = total sales after \( t \) months, \( \frac{dS}{dt} = 0.1(100,000 - S) \); \( S(0) = 0 \).

Solution: \( S = 100,000(1 - e^{-0.1t}) \) monitors after \( t \) months.

27. a. \( \frac{dp}{dt} = k(D(p) - S(p)) = k(20,000 - 1,000p) \)
b. \( p = 20 - Ae^{-kx} \) c. \( p = 20 - 10e^{-0.2321t} \) dollars after \( t \) months. 29. \( q = 0.6078e^{-0.05p}p^{1.5} \)
33. \( S = \frac{2}{1999} e^{-0.5x} + \frac{1}{1999} \)
   It will take about 27 months to saturate the market. Graph:

35. a. \( y = b e^{ax} \)
   \( A = \text{constant} \)
   b. \( y = 10 e^{-0.69315e^{-x}} \) Graph:

37. A general solution gives all possible solutions to the equation, using at least one arbitrary constant. A particular solution is one specific function that satisfies the equation. We obtain a particular solution by substituting specific values for any arbitrary constants in the general solution. Example: \( y' = x \) has general solution \( y = -\frac{1}{6} x^3 + Cx + D \) (integrate twice).

41. \( y' = -4e^{-x} + 3 \)

Chapter 14 Review

ANSWERS TO SELECTED EXERCISES
Section 15.2

1. \( z = 1 - x - y \)

3. \( z = 2x + y - 2 \)

5. \( z = -2 \)

7. \( y = 2 \)

9. \( x = -3 \)

11. \( z = 2 \) (H)

13. \( z = 2y^2 \) (B)

15. \( z = x^2 + y^2 \) (F)

17. \( z = 2 + |x|, y = 0 \)

19. \( z = 4x^2 + 4, y = 1 \)

21. \( z = 2 + \sqrt{x^2 + y} \)

23. \( z = x + 2 \)

25. \( z = x + y \)

27. \( z = 2x^2 + 2y^2 \)

29. \( z = x^2 + 2y^2 \)

31. \( z = 2 + \sqrt{x^2 + y^2} \)

33. \( z = 2 + \sqrt{x^2 + y} \)

35. \( x^2 + y^2 = 4, z = -4 \)
39. The graph is a plane with $x$-intercept $-40$, $y$-intercept $-60$, and $z$-intercept $240,000$. b. The slice $x = 10$ is the straight line with equation $z = 300,000 + 4000y$. It describes the cost function for the manufacture of trucks if car production is held fixed at 10 cars per week. c. The level curve $z = 480,000$ is the straight line $6000x + 4000y = 240,000$. It describes the number of cars and trucks you can manufacture to maintain weekly costs at $480,000$. 43. The graph is a plane with $x_1$-intercept $0.3$, $x_2$-intercept $33$, and $x_3$-intercept $0.66$. The slices by $x_1$ constant are straight lines that are parallel to each other. Thus, the rate of change of General Motors’ share as a function of Ford’s share does not depend on Chrysler’s share. Specifically, GM’s share decreases by 0.02 percentage points per 1 percentage-point increase in Ford’s market share, regardless of Chrysler’s share. 45. a. The slices $x$ and $y$ constant are straight lines. b. No. Even though the slices $x$ constant and $y$ constant are straight lines, the level curves are not, and so the surface is not a plane. c. The slice $x = 10$ has a slope of 3800. The slice $x = 20$ has a slope of 3600. Manufacturing more cars lowers the marginal cost of manufacturing trucks. 47. Both level curves are quarter-circles. (We see only the portion in the first quadrant because $e \geq 0$ and $h \geq 0$.) The level curve $C = 30,000$ represents the relationship between the number of electricians and the number of carpenters used in building a home that costs $30,000. Similarly for the level curve $C = 40,000$. 49. The following figure shows several level curves together with several lines of the form $h + w = c$. From the figure, thinking of the curves as contours on a map, we see that the largest value of $A$ anywhere along any of the lines $h + w = c$ occurs midway along the line, when $h = w$. Thus, the largest area rectangle with a fixed perimeter occurs when $h = w$ (that is, when the rectangle is a square). 51. The level curve at $z = 3$ has the form $3 = x^{0.5} y^{0.5}$, or $y = 9/x$, and shows the relationship between the number of workers and the operating budget at a production level of 3 units. 53. The level curve at $z = 0$ consists of the nonnegative $y$-axis ($x = 0$) and tells us that zero utility corresponds to zero copies of Macro Publish, regardless of the number of copies of Turbo Publish. (Zero copies of Turbo Publish does not necessarily result in zero utility, according to the formula.) 55. Plane 57. Agree: any slice through a plane is a straight line. 59. The graph of a function of three or more variables lives in four-dimensional (or higher) space, which makes it difficult to draw and visualize. 63. We need one dimension for each of the variables plus one dimension for the value of the function.
27. \( f_{xy}(x, y) = -1.2x^{-1.4}y^{0.4}; f_{yy}(x, y) = -1.2x^{0.6}y^{-1.6}; \)
\( f_{x1}(x, y) = f_{x2}(x, y) = 1.2x^{-0.4}y^{-0.6}; f_{x1}(1, -1) \) undefined;  
\( f_{x2}(1, -1) \) undefined; \( f_{x1}(1, -1) \) & \( f_{x2}(1, -1) \) undefined
29. \( f_{x1}(x, y, z) = yz; f_{x2}(x, y, z) = xz; f_{x3}(x, y, z) = xy; \)
\( f_{x1}(0, 1, -1) = 1; f_{x2}(0, -1, 1) = 0; f_{x3}(0, 0, 1) = 0 \)
31. \( f_{x1}(x, y, z) = 4/(x + y + z)^2; f_{x2}(x, y, z) = 8z/(x + y + z)^2; \)
\( f_{x3}(0, -1, 1) \) undefined; \( f_{x1}(0, -1, 1) \) undefined; \( f_{x2}(0, -1, 1) \) undefined
33. \( f_{x1}(x, y, z) = e^{x+y} + yze^{x+z}; \)
\( f_{x2}(x, y, z) = xe^{x+y} + e^{x+z}; f_{x3}(x, y, z) = xy(e^{x+y} + e^{x+z}); \)
\( f_{x1}(0, -1, 1) = e^{-1} - 1; f_{x2}(0, -1, 1) = 1; f_{x3}(0, -1, 1) = 0 \)
35. \( f_{x1}(x, y, z) = 0.1x^{-0.9}y^{0.4}z^{0.5}; f_{x2}(x, y, z) = 0.5x^{0.1}y^{0.4}z^{-0.5}; \)
\( f_{x3}(1, -1, 1) \) undefined; \( f_{x2}(1, -1, 1) \) undefined; \( f_{x3}(0, -1, 1) \) undefined
37. \( f_{x1}(x, y, z) = yze^{x+y}; f_{x2}(x, y, z) = xze^{x+y}; \)
\( f_{x3}(x, y, z) = xe^{x+y}; f_{x3}(0, 1, -1) = -1; \)
\( f_{x1}(0, 1, -1) = f_{x2}(0, 1, -1) = 0 \)
39. \( f_{x1}(x, y, z) = 0; \)
\( f_{x2}(x, y, z) = 0; \)
\( f_{x3}(0, 1, -1) \) undefined; \( f_{x2}(0, 1, -1) \) undefined; \( f_{x3}(0, 1, -1) \) undefined
41. \( \partial C/\partial x = 6000, \) the marginal cost to manufacture each car is $6000. \( \partial C/\partial y = 4000, \) the marginal cost to manufacture each truck is $4000.
43. \( \partial y/\partial x = -0.78. \) The number of articles written by researchers in the U.S. was decreasing at a rate of 0.78 percentage points per year.

57. \( P_l(10,000,000, 1,000,000) \approx 0.0001010 \) papers/$
59. \( U_l(10, 5) = 5.18, U_r(10, 5) = 2.09. \) This means that, if 10 copies of Macro Publish and 5 copies of Turbo Publish are purchased, the company’s daily productivity is increasing at a rate of 5.18 pages per day for each additional copy of Macro purchased and by 2.09 pages per day for each additional copy of Turbo purchased. b. \( U_r(10, 5)/U_l(10, 5) \approx 2.48 \) is the ratio of the usefulness of one additional copy of Macro to one of Turbo. Thus, with 10 copies of Macro and 5 copies of Turbo, the company can expect approximately 2.48 times the productivity per additional copy of Macro compared to Turbo. 61. \( 6 \times 10^9 \) N/sec
63. a. \( A_R(100, 0.1, 10) = 2.59; A_C(100, 0.1, 10) = 2.357.95; \)
\( A_C(100, 0.1, 10) = 24.72. \) Thus, for a $100 investment at 10% interest, after 10 years the accumulated amount is increasing at a rate of $2.59 per $1 of principal, at a rate of $2.357.95 per increase of $1 in r (note that this would correspond to an increase in the interest rate of 10%), and at a rate of $24.72 per year.

65. a. \( P_x = Ka \left( \frac{y}{x} \right)^b \) and \( P_y = Kb \left( \frac{x}{y} \right)^a. \) They are equal precisely when \( \frac{a}{b} = \frac{x}{y}. \) Substituting
\( b = 1 - a \) now gives \( \frac{a}{b} = \frac{x}{y}. \) The given information implies that \( P_y(100, 200) = P_x(100, 200). \) By part (a), this occurs precisely when \( a/b = x/y = 100/200 = 1/2. \) But \( b = 1 - a, \) so \( a/(1 - a) = 1/2, \) giving \( a = 1/3 \) and \( b = 2/3. \)
67. Decreasing at 0.0075 parts of nutrient per part of water/sec
69. \( f/s \) increasing at a rate of s units per unit of x, \( f/s \) increasing at a rate of t units per unit of y, and the value of \( f/s \) when \( x = a \) and \( y = b. \) The marginal cost of building an additional orbitalis, zonars per unit.

73. Answers will vary. One example is \( f(x, y) = -2x + 3y. \) Others are \( f(x, y) = -2x + 3y + 9 \) and \( f(x, y) = xy - 3x + 2y + 10. \)
75. a. \( b \) is the z-intercept of the plane. \( m \) is the slope of the intersection of the plane with the xz-plane. \( n \) is the slope of the intersection of the plane with the yz-plane. b. Write \( z = b + mx + ny. \) We are told that \( \partial z/\partial x = m, \) so \( r = m. \)

Section 15.4
1. \( \text{P: relative minimum; } R: \text{relative maximum}. \)
3. \( P: \text{saddle point; } Q: \text{relative minimum}. \)
5. \( \text{Relative maximum}. \) 7. \( \text{Neither}. \) 9. \( \text{Saddle point}. \)
11. \( \text{Relative minimum at } (0, 0, 1). \) 13. \( \text{Relative maximum at } (-1/2, 1/2, 3/2). \)
15. \( \text{Relative maximum at } (0, 0, 0). \) Saddle points at \((\pm 2, 2, -16). \) Relative minimum at \((0, 0, 1). \)
19. \( \text{Relative minimum at } (-2, -2, -16). \) (0, 0) a
critical point that is not a relative extremum 21. Saddle point at 
(0, 0, −1) 23. Relative maximum at (−1, 0, e) 25. Relative 
minimum at (21/3, 21/3, 3(21/3)) 27. Relative 
minimum at (1, 1, 4) and (−1, −1, 4) 29. Absolute minimum 
at (0, 0, 0) 31. None; the relative maximum at (0, 0, 0) is not 
absolute. (look at, say, (10, 10)). 33. Minimum of 1/3 at 
(0, 0, 1) 53. (The situation is similar for the case of increasing 
and decreasing functions.)

Relative minimum at (21 − 1, 0; (0, 0, 0) 13. 35. At (0, 0, 1) 
the marginal cost is decreasing with increasing 
output. 37. $10

39. $580.81 for the Ultra 
Mini and $808.08 for the Big Stack. 41. 18 in x 18 in x 36 in, 
volume = 11,664 cubic inches 43.

45. Function not defined on circle

47. H must be positive. 49. No. In order for there to be a
relative maximum at (a, b), all vertical planes through (a, b) 
should yield a curve with a relative maximum at (a, b). It could
happen that a slice by another vertical plane through (a, b) (such
as x = a = y = b) does not yield a curve with a relative
maximum at (a, b). [An example is \( f(x, y) = x^2 + y^2 - \sqrt{3}y \)],
at the point (0, 0). Look at the slices through x = 0, y = 0 and
y = x.]

51. \( \bar{C}_y = \frac{\partial}{\partial x} \left( \frac{C}{x+y} \right) = \frac{(x+y)C_x - C}{(x+y)^2} \). If this is
zero, then \( (x+y)C_x = C \), or \( C_x = \frac{C}{x+y} = \bar{C} \). Similarly, if
\( C_y = 0 \) then \( C_y = \bar{C} \). This is reasonable because if the average
cost is decreasing with increasing x, then the average cost is
greater than the marginal cost \( C_x \). Similarly, if the average
cost is increasing with increasing x, then the average cost is
less than the marginal cost \( C_x \). Thus, if the average cost is stationary with
increasing x, then the average cost equals the marginal cost \( C_x \).
(The situation is similar for the case of increasing y.)

53. The equation of the tangent plane at the point (a, b, z) is \( z = f(a, b) + f_x(a, b)(x-a) + f_y(a, b)(y-b) \). If f has a
relative extremum at (a, b), then \( f_x(a, b) = 0 \) and \( f_y(a, b) = 0 \).
Substituting these into the equation of the tangent plane gives
\( z = f(a, b) \), a constant. But the graph of \( z = constant \) is a plane
parallel to the xy-plane.

\( x = \) number of new customers at JungleBooks.com, 
\( y = \) number of new customers at FarmerBooks.com

b. 250  33. 2320 hits per day  35. \( 0.08 + 0.00003x \) hits (daily) per dollar spent on television advertising per month; increases with increasing \( x \)

c. $4000 per month

37. About 15,800 orders per day  37. $23,050

Chapter 16

Section 16.1

1. \[ \]

3. \[ \]

5. \[ \]

7. \[ \]

9. \[ \]

11. \[ \]

13. \( f(x) = \sin(2\pi x) + 1 \)

15. \( f(x) = 1.5 \sin(4\pi(x - 0.25)) \)

17. \( f(x) = 50 \sin(\pi(x - 5))/10 - 50 \)

19. \( f(x) = \cos(2\pi x) \)

21. \( f(x) = 1.5 \cos(4\pi(x - 0.375)) \)

23. \( f(x) = 40 \cos(\pi(x - 0.1))/10 + 40 \)

25. \( f(t) = 4.2 \sin(\pi/2 - 2\pi t) + 3 \)

27. \( g(x) = 4 - 1.3 \sin(\pi/2 - 2.3(x - 4)) \)

31. \( \sqrt{3}/2 \)

33. \[ \]

35. \[ \]

37. \[ \]

45. \( P(t) = 7.5 \sin[\pi(t - 13)/26] + 12.5 \)

47. \( s(t) = 7.5 \sin[\pi(t - 9)/6] + 87.5 \)

49. \( s(t) = 7.5 \cos(\pi t/6) + 87.5 \)

51. \( d(t) = 5 \sin(2\pi(t - 1.625))/13.5 + 10 \)
53. a. \(u(t) = 2.5 \sin(2\pi(t - 0.75)) + 7.5\)  
b. \(c(t) = 1.04[2.5 \sin(2\pi(t - 0.75))] + 7.5\)  
55. a. \(P \approx 8, C \approx 6, A \approx 2, \alpha \approx 8\) (Answers may vary)

57. a. \(y(t) = \frac{2}{\pi} \cos(x) + \frac{2}{3\pi} \cos(3x) + \frac{2}{5\pi} \cos(5x) + \frac{2}{7\pi} \cos(7x) + \frac{2}{9\pi} \cos(9x) + \frac{2}{11\pi} \cos(11x)\)

59. The period is approximately 12.6 units

61. Lows: \(B - A\); Highs: \(B + A\)  
63. He is correct. The other trig functions can be obtained from the sine function by first using the formula \(\cos x = \sin(x + \pi/2)\) to obtain cosine, and then using the formulas:

\[
\tan x = \frac{\sin x}{\cos x}, \quad \cot x = \frac{\cos x}{\sin x}, \quad \sec x = \frac{1}{\cos x}, \quad \csc x = \frac{1}{\sin x}
\]

to obtain the rest.  
65. The largest \(B\) can be is \(A\). Otherwise, if \(B\) is larger than \(A\), the low figure for sales would have the negative value of \(A - B\).

Section 16.2

1. \(\cos x + \sin x\)  
3. \((\cos x)(\tan x) + (\sin x)(\sec^2 x)\)  
5. \(-2\csc x \cot x - \sec x \tan x + 3\)  
7. \(\cos x - x \sin x + 2x^2\)  
9. \((2x - 1) \tan x + (x^2 - x + 1) \sec^2 x\)

11. \(-[\csc^2 x(1 + \sec x) + \cot x \sec x \tan x]/(1 + \sec x)^2\)

13. \(-2 \cos x \sin x\)  
15. \(2 \sec^2 x \tan x\)  
17. \(\pi \cos \left[\frac{1}{5}(x - 4)\right]\)

19. \(-(2x - 1) \sin(x^2 - x)\)

21. \((2.2x^{1.2} + 1.2) \sec(x^2 + 2.2x^2 - 1.2x - 1) + \tan(x^2 + 2.2x - 1)\)

23. \(\sec x \tan x \tan(x^2 - 1) + 2x \sec x \sec^2(x^2 - 1)\)

25. \(e^x[-\sin(e^x) + \cos x - \sin x]\)  
27. \(\sec x\)

33. \(e^{-2x}[-3 \sin(3\pi x) + 3\pi \cos(3\pi x)]\)

35. \(1.5[\sin(3\pi x)]^{-0.5} \cos(3\pi x)\)

37. \(\frac{x^2 - 3x^2}{(x^2 - 1)^2} \sec \left[\frac{x^3}{x^2 - 1}\right] \tan \left[\frac{x^3}{x^2 - 1}\right]\)

39. \(\cot(2x - 1)\)

41. a. Not differentiable at 0  
b. \(f'(1) \approx 0.5403\)

43. a. \(0\)  
b. \(45\)  
c. \(2\)  
d. \(47\)  
49. \(1/\sec^2 y\)

51. \([-1 + y \cos(xy)]/[1 + x \cos(xy)]\)

53. \(c'(t) = 2\pi(\pi(t - 0.75))\)  
55. \(N'(6) \approx -32.12\)

On January 1, 2003, the number of sunspots was decreasing at a rate of 32.12 sunspots per year.

57. \(c'(t) = 1.035[\ln(1.035)(0.8 \sin(2\pi t) + 10.2) + 1.6\pi \cos(2\pi t)]\)

61. a. (III)  
b. Increasing at a rate of 0.157 degrees per thousand years  
63. \(-6\)  
65. Answers will vary. Examples:

\(f(x) = \sin x\), \(f'(x) = \cos x\)  
67. Answers will vary. Examples:

\(f(x) = e^{-x}\)  
\(f(x) = -2e^{-x}\)  

69. The graph of \(\cos x\) slopes down over the interval \((0, \pi)\), so that its derivative is negative over that interval. The function \(-\sin x\), and not \(\sin x\), has this property.

71. The derivative of \(\sin x\) is \(\cos x\). When \(x = 0\), this is \(\cos(0) = 1\). Thus, the tangent to the graph of \(\sin x\) at the point \((0, 0)\) has slope 1, which means it slopes upward at 45°.

Section 16.3

1. \(-\cos x - 2\sin x + C\)  
3. \(2\sin x + 4.3 \cos x - 9.33x + C\)

5. \(3.4 \tan x + (\sin x)/1.3 - 3.2e^x + C\)

7. \((7.6/3) \sin(3x - 4) + C\)  
9. \(-((1/6) \cos(3x^2 - 4)) + C\)

11. \(-2 \cos(x^2 + x) + C\)  
13. \((1/6) \tan(3x^2 + 2x^3) + C\)

15. \(-(1/6) \ln |\cos(2x^3)| + C\)
17. \(3 \ln |\sec(2x - 4) + \tan(2x - 4)| + C\)
19. \((1/2) \sin(e^{x^2} + 1) + C\)
21. \(-2\)
23. \(\ln(2)\)
25. \(0\)

27. \(\frac{1}{4} \cos(4x) + C\)
35. \(-\sin(-x + 1) + C\)
37. \([\cos(-1.1x - 1)]/1.1 + C\)
39. \(-\frac{1}{4} \ln |\sin(-4x)| + C\)

43. \(\pi^2/4\)
51. \(\pi^2 - 4\)
53. Average voltage over \([0, 1/6]\) is zero; 60 cycles per second.

55. Diverges
57. Converges to 1/2
59. \(C(t) = 0.04r + \frac{2.6}{\pi} \cos \left[\frac{\pi}{26} (t - 25)\right] + 1.02\)

61. 12 feet
63. 79 sunspots

65. \(P(t) = 7.5 \sin[(\pi/26) (t - 13)] + 12.5; 7.7\%

67. a. Average voltage over \([0, 1/6]\) is zero; 60 cycles per second.

\[c. 116.673 \text{ volts.} \quad \text{69. } \$50,000 \quad \text{71. It is always zero.}\]

73. \(s = -\frac{K}{\omega^2} \sin(\omega t - \alpha) + Lt + M\) for constants \(L\) and \(M\)

**Chapter 16 Review**

1. \(f(x) = 1 + 2 \sin x\)
3. \(f(x) = 2 + 2 \sin[x(x - 1)] = 2 + 2 \sin[x + 1]\)
5. \(f(x) = 1 + 2 \cos(x - \pi/2)\)
7. \(f(x) = 2 + 2 \cos[x + 1/2] = 2 + 2 \cos[x - 3/2]\)
9. \(-2x \sin(x^2 - 1)\)
11. \(2e^x \sec^2(2e^x - 1)\)
13. \(4x \sin(x^2) \cos(x^2)\)
15. \(2 \sin(2x - 1) + C\)
17. \(\tan(2x^2 - 1) + C\)
19. \(-\frac{1}{2} \ln |\cos(x^2 + 1)| + C\)
21. \(1\)
23. \(-x^2 \cos x + 2x \sin x + 2 \cos x + C\)
25. \(s(t) = 10,500 + 1500 \sin[(2\pi/52)t - \pi]\) \(\approx 10,500 + 1500 \sin(0.12083t - 3.14159)\)

**Appendix A**

1. False statement
3. Not a statement, because it is not declarative
5. True statement
7. True (we hope!) statement
9. Not a statement, because it is self-referential
11. \((\sim p) \land q\)
13. \((p \land q) \land q\) or just \(p \land q \land r\)
15. \(p \lor \sim p\)
17. Willis is a good teacher and his students do not hate math.
19. Either Carla is a good teacher, or she is not.
21. Willis' students both hate and do not hate math.
23. It is not true that either Carla is a good teacher or her students hate math.
