# Counting topologies of metric holomorphic polynomial field with simple zeros 

Art Duval ${ }^{1}$, Martín Eduardo Frías-Armenta ${ }^{2}$<br>${ }^{1}$ University of Texas at El Paso, ${ }^{2}$ Universidad de Sonora<br>XXXI Semana Nacional de<br>Investigación y Docencia en Matemáticas<br>Taller de Estructuras Geométricas y Combinatoria<br>Universidad de Sonora (online)<br>May 27, 2021<br>AD supported by Simons Foundation Grant 516801

## Act I

## Setting the scene: Trees from flow diagrams

## Metric holomorphic polynomial field with simple zeros

## Metric holomorphic polynomial field with simple zeros

## Complex rotation

## Complex rotation

## Put it all together, and get a graph

## Trees

So we are looking at unlabeled trees with black and white vertices

- no white vertices are adjacent to each other
- each white vertex is adjacent to at least three black vertices
- no restriction on neighbors of black vertices

## Trees

So we are looking at unlabeled trees with black and white vertices

- no white vertices are adjacent to each other
- each white vertex is adjacent to at least three black vertices
- no restriction on neighbors of black vertices

We want to count such trees up to rotation (but not reflection)

## Example

The first two are the same, but the third is different.

## Act II

Flashback: Counting (unlabeled) trees

## How to grow different kinds of rooted trees, recursively

- Rooted trees:
- $\mathcal{A}=X \cdot E(\mathcal{A})$,
- $E$ stands for "set of"
- Ordered rooted tree:
- $\mathcal{A}_{L}=X \cdot L\left(\mathcal{A}_{L}\right)$
- $L$ stands for "linear order"
- Planar rooted trees:
- $P=X+X \cdot C\left(\mathcal{A}_{L}\right)$
- $C$ stands for "cyclic order"

Example

## Unrooting I: Center of tree

## Definition

Center of a tree is the set of vertices $v$ that minimize

$$
\max _{u} \mathrm{~d}(u, v)
$$

It is always either a single vertex, or an edge.

Example

## Unrooting I: Center of tree

## Definition

Center of a tree is the set of vertices $v$ that minimize

$$
\max _{u} \mathrm{~d}(u, v)
$$

It is always either a single vertex, or an edge. So this naturally roots a tree at either a vertex or an edge.

Example

## Unrooting II: Dissymmetry theorem

Theorem (Dissymmetry)

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2}
$$

where $\mathfrak{a}$ denotes unrooted trees and $E_{2}$ is the species of sets with exactly two elements.

## Unrooting II: Dissymmetry theorem

Theorem (Dissymmetry)

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2},
$$

where $\mathfrak{a}$ denotes unrooted trees and $E_{2}$ is the species of sets with exactly two elements.

Proof.
(Sketch) LHS is trees rooted at a vertex or an edge. RHS is trees (unrooted) or ordered pair of rooted trees.

## Unrooting II: Dissymmetry theorem

Theorem (Dissymmetry)

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2},
$$

where $\mathfrak{a}$ denotes unrooted trees and $E_{2}$ is the species of sets with exactly two elements.

## Proof.

(Sketch) LHS is trees rooted at a vertex or an edge. RHS is trees (unrooted) or ordered pair of rooted trees. So we need isomorphism between trees rooted at vertex or edge other than the center, with ordered pairs of rooted trees.

## Quick note about unlabeling

Theorem (Dissymmetry)

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2}
$$

where $\mathfrak{a}$ denotes unrooted trees and $E_{2}$ is the species of sets with exactly two elements.
Dissymmetry theorem allows us to count unrooted, but still labeled trees. To unlabel the trees, we need "cycle index series".

## Act III

## Return to the present day: Counting our trees

## Black and white vertices, not at the root

Similar to ordered rooted trees, but now color-aware

## Recursive equation

$$
\begin{gathered}
Y_{3}=Y_{1}+Y_{2}=X_{1} \cdot L\left(Y_{3}\right)+X_{2} \cdot L_{\geq 2}\left(X_{1} \cdot L\left(Y_{3}\right)\right) \\
y_{3}=x_{1} \ell+x_{2} \frac{\left(x_{1} \ell\right)^{2}}{1-\left(x_{1} \ell\right)}
\end{gathered}
$$

where $\ell=\frac{1}{1-y_{3}}$.

## Recursive equation

$$
\begin{gathered}
Y_{3}=Y_{1}+Y_{2}=X_{1} \cdot L\left(Y_{3}\right)+X_{2} \cdot L_{\geq 2}\left(X_{1} \cdot L\left(Y_{3}\right)\right) \\
y_{3}=x_{1} \ell+x_{2} \frac{\left(x_{1} \ell\right)^{2}}{1-\left(x_{1} \ell\right)}
\end{gathered}
$$

where $\ell=\frac{1}{1-y_{3}}$. Simplifying,

$$
x_{1}+x_{1}^{2}\left(x_{2}-1\right)-\left(y_{3}-1\right)^{2} y_{3}-x_{1} y_{3}^{2}=0
$$

Unique real root $y_{3}\left(x_{1}, x_{2}\right)=$

## Recursive equation

$$
\begin{array}{r}
Y_{3}=Y_{1}+Y_{2}=X_{1} \cdot L\left(Y_{3}\right)+X_{2} \cdot L_{\geq 2}\left(X_{1} \cdot L\left(Y_{3}\right)\right) \\
y_{3}=x_{1} \ell+x_{2} \frac{\left(x_{1} \ell\right)^{2}}{1-\left(x_{1} \ell\right)}
\end{array}
$$

where $\ell=\frac{1}{1-y_{3}}$. Simplifying,

$$
x_{1}+x_{1}^{2}\left(x_{2}-1\right)-\left(y_{3}-1\right)^{2} y_{3}-x_{1} y_{3}^{2}=0
$$

Unique real root $y_{3}\left(x_{1}, x_{2}\right)=$

$$
\begin{aligned}
& \frac{\left.\left(3-12 \times 1+15 \times 1^{2}+2 \times 1^{3}-27 \times 1^{2} \times 2+\sqrt{\left(4\left(-1+4 \times 1-\times 1^{2}\right)^{3}+\left(2-12 \times 1+15 \times 1^{1}+2 \times 1^{3}-27 \times 1^{2} \times 2\right)^{2}\right)}\right)^{1 / 3}\right)}{\left(3\left(2^{1 / 3}\left(-1+4 \times 1-\times 1^{2}\right)\right)\right.} \\
& -\frac{1}{32^{1 / 3}}\left(2-12 \times 1+15 \times 1^{2}+2 \times 1^{3}-27 \times 1^{2} \times 2+\sqrt{\left(4\left(-1+4 \times 1-\times 1^{2}\right)^{3}+\left(2-12 \times 1+15 \times 1^{2}+2 \times 1^{1}-27 \times 1^{2} \times 2\right)^{2}\right)}\right)
\end{aligned}
$$

## Dissymmetry again

Recall

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2}
$$

The same arguments apply. But now, paying attention to color,

$$
\mathcal{A}_{R}=\left(X_{1} \cdot\left(1+C\left(Y_{3}\right)\right)\right)+\left(X_{2} \cdot C_{\geq 3}\left(X_{1} \cdot L\left(Y_{3}\right)\right)\right)
$$

## Dissymmetry again

Recall

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2}
$$

The same arguments apply. But now, paying attention to color,

$$
\begin{aligned}
\mathcal{A}_{R} & =\left(X_{1} \cdot\left(1+C\left(Y_{3}\right)\right)\right)+\left(X_{2} \cdot C_{\geq 3}\left(X_{1} \cdot L\left(Y_{3}\right)\right)\right) \\
E_{2}\left(\mathcal{A}_{R}\right) & =E_{2}\left(Y_{1}\right)+Y_{2} \cdot Y_{1}=E_{2}\left(Y_{3}\right)-E_{2}\left(Y_{2}\right)
\end{aligned}
$$

## Dissymmetry again

Recall

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2}
$$

The same arguments apply. But now, paying attention to color,

$$
\begin{aligned}
\mathcal{A}_{R} & =\left(X_{1} \cdot\left(1+C\left(Y_{3}\right)\right)\right)+\left(X_{2} \cdot C_{\geq 3}\left(X_{1} \cdot L\left(Y_{3}\right)\right)\right) \\
E_{2}\left(\mathcal{A}_{R}\right) & =E_{2}\left(Y_{1}\right)+Y_{2} \cdot Y_{1}=E_{2}\left(Y_{3}\right)-E_{2}\left(Y_{2}\right) \\
\mathcal{A}_{R}^{2} & =Y_{1}^{2}+2 Y_{1} Y_{2}=Y_{3}^{2}-Y_{2}^{2}
\end{aligned}
$$

## Dissymmetry again

Recall

$$
\mathcal{A}+E_{2}(\mathcal{A})=\mathfrak{a}+\mathcal{A}^{2}
$$

The same arguments apply. But now, paying attention to color,

$$
\begin{aligned}
\mathcal{A}_{R} & =\left(X_{1} \cdot\left(1+C\left(Y_{3}\right)\right)\right)+\left(X_{2} \cdot C_{\geq 3}\left(X_{1} \cdot L\left(Y_{3}\right)\right)\right) \\
E_{2}\left(\mathcal{A}_{R}\right) & =E_{2}\left(Y_{1}\right)+Y_{2} \cdot Y_{1}=E_{2}\left(Y_{3}\right)-E_{2}\left(Y_{2}\right) \\
\mathcal{A}_{R}^{2} & =Y_{1}^{2}+2 Y_{1} Y_{2}=Y_{3}^{2}-Y_{2}^{2}
\end{aligned}
$$

And then, to remove labels, again bring in cycle index series.

## Act IV

Adding color

## How to grow a general variety of rooted trees, recursively

- $R$-enriched rooted trees: $\mathfrak{a}_{R}^{\circ}=\mathcal{A}_{R}=X \cdot R\left(\mathcal{A}_{R^{\prime}}\right)$

Example

## How to grow a general variety of rooted trees, recursively

- $R$-enriched rooted trees: $\mathfrak{a}_{R}^{\bullet}=\mathcal{A}_{R}=X \cdot R\left(\mathcal{A}_{R^{\prime}}\right)$
- $R^{\prime}$-enriched rooted tree: $\mathcal{A}_{R^{\prime}}=X \cdot R^{\prime}\left(\mathcal{A}_{R^{\prime}}\right)$

Example

## How to grow a general variety of rooted trees, recursively

- $R$-enriched rooted trees: $\mathfrak{a}_{R}^{\bullet}=\mathcal{A}_{R}=X \cdot R\left(\mathcal{A}_{R^{\prime}}\right)$
- $R^{\prime}$-enriched rooted tree: $\mathcal{A}_{R^{\prime}}=X \cdot R^{\prime}\left(\mathcal{A}_{R^{\prime}}\right)$

Example

Definition (derivative $R^{\prime}$ )

## Adding c lor

$$
R^{(j)}=\frac{\partial R}{\partial X_{j}}
$$

## Adding c lor

$$
\begin{aligned}
R^{(j)} & =\frac{\partial R}{\partial X_{j}} \\
\left(\mathcal{A}_{i}\right)_{R^{(j)}} & =X_{i} R_{i}^{(j)}\left(\left(\left(\mathcal{A}_{1}\right)_{R^{(i)}},\left(\mathcal{A}_{2}\right)_{R^{(i)}}, \ldots,\left(\mathcal{A}_{k}\right)_{R^{(i)}}\right)\right)
\end{aligned}
$$

## Adding c lo

$$
\begin{aligned}
R^{(j)} & =\frac{\partial R}{\partial X_{j}} \\
\left(\mathcal{A}_{i}\right)_{R^{(j)}} & =X_{i} R_{i}^{(j)}\left(\left(\left(\mathcal{A}_{1}\right)_{R^{(i)}},\left(\mathcal{A}_{2}\right)_{R^{(i)}}, \ldots,\left(\mathcal{A}_{k}\right)_{R^{(i)}}\right)\right) \\
\mathfrak{a}_{R}^{\bullet i} & =X_{i} R_{i}\left(\left(\left(\mathcal{A}_{1}\right)_{R^{(i)}},\left(\mathcal{A}_{2}\right)_{R^{(i)}}, \ldots,\left(\mathcal{A}_{k}\right)_{R^{(i)}}\right)\right)
\end{aligned}
$$

## Example: Vector fields

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =C_{\geq 3}\left(U_{1}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =L_{\geq 2}\left(U_{1}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =0
\end{aligned}
$$

## Example: Vector fields

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =C_{\geq 3}\left(U_{1}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =L_{\geq 2}\left(U_{1}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =0
\end{aligned}
$$

$$
\text { Let } Y_{i, j}=\left(\mathcal{A}_{i}\right)_{R^{(j)}}
$$

## Example: Vector fields

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =C_{\geq 3}\left(U_{1}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =L_{\geq 2}\left(U_{1}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =0
\end{aligned}
$$

$$
\begin{aligned}
& \text { Let } Y_{i, j}=\left(\mathcal{A}_{i}\right)_{R^{(j)}} \\
& \qquad \begin{array}{c}
Y_{1}=Y_{1,1}=Y_{1,2}=X_{1} R_{1}^{(1)}\left(Y_{1,1}, Y_{2,1}\right)=X_{1} L\left(Y_{1,1}+Y_{2,1}\right) \\
Y_{2}=Y_{2,1}=X_{2} R_{2}^{(1)}\left(Y_{1,2}, Y_{2,2}\right)=X_{2} L_{\geq 2}\left(Y_{1,2}\right)
\end{array}
\end{aligned}
$$

## Example: Vector fields

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =C_{\geq 3}\left(U_{1}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =L_{\geq 2}\left(U_{1}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =0
\end{aligned}
$$

$$
\begin{aligned}
& \text { Let } Y_{i, j}=\left(\mathcal{A}_{i}\right)_{R^{(j)}} \\
& \qquad \begin{aligned}
Y_{1}=Y_{1,1}=Y_{1,2} & =X_{1} R_{1}^{(1)}\left(Y_{1,1}, Y_{2,1}\right)=X_{1} L\left(Y_{1,1}+Y_{2,1}\right) \\
& =X_{1} L\left(Y_{1}+Y_{2}\right) \\
Y_{2}=Y_{2,1} & =X_{2} R_{2}^{(1)}\left(Y_{1,2}, Y_{2,2}\right)=X_{2} L_{\geq 2}\left(Y_{1,2}\right) \\
& =X_{2} L_{\geq 2}\left(Y_{1}\right)
\end{aligned}
\end{aligned}
$$

## New example

No restriction on black vertices; white vertices have at most one neighbor of each color.

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =\left(1+U_{1}\right)\left(1+U_{2}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =\left(1+U_{2}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =\left(1+U_{1}\right)
\end{aligned}
$$

## New example

No restriction on black vertices; white vertices have at most one neighbor of each color.

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =\left(1+U_{1}\right)\left(1+U_{2}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =\left(1+U_{2}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =\left(1+U_{1}\right) \\
Y_{1}=Y_{1,1}=Y_{1,2} & =X_{1} R_{1}^{(1)}\left(Y_{1,1}, Y_{2,1}\right)=X_{1} L\left(Y_{1}+Y_{2,1}\right) \\
Y_{2,1} & =X_{2} R_{2}^{(1)}\left(Y_{1,2}, Y_{2,2}\right)=X_{2}\left(1+Y_{2,2}\right) \\
Y_{2,2} & =X_{2} R_{2}^{(2)}\left(Y_{1,2}, Y_{2,2}\right)=X_{2}\left(1+Y_{1}\right)
\end{aligned}
$$

## New example

No restriction on black vertices; white vertices have at most one neighbor of each color.

$$
\begin{aligned}
R_{1}\left(U_{1}, U_{2}\right) & =C\left(U_{1}+U_{2}\right) \\
R_{1}^{(1)}\left(U_{1}, U_{2}\right) & =R_{1}^{(2)}\left(U_{1}, U_{2}\right)=L\left(U_{1}+U_{2}\right) \\
R_{2}\left(U_{1}, U_{2}\right) & =\left(1+U_{1}\right)\left(1+U_{2}\right) \\
R_{2}^{(1)}\left(U_{1}, U_{2}\right) & =\left(1+U_{2}\right) \\
R_{2}^{(2)}\left(U_{1}, U_{2}\right) & =\left(1+U_{1}\right) \\
Y_{1}=Y_{1,1}=Y_{1,2} & =X_{1} R_{1}^{(1)}\left(Y_{1,1}, Y_{2,1}\right)=X_{1} L\left(Y_{1}+Y_{2,1}\right) \\
Y_{2,1} & =X_{2} R_{2}^{(1)}\left(Y_{1,2}, Y_{2,2}\right)=X_{2}\left(1+Y_{2,2}\right) \\
Y_{2,2} & =X_{2} R_{2}^{(2)}\left(Y_{1,2}, Y_{2,2}\right)=X_{2}\left(1+Y_{1}\right)
\end{aligned}
$$

From this we get the recursive equation for $Y_{1}$ :

$$
Y_{1}=X_{1} L\left(Y_{1}+Y_{2,1}\right)=X_{1} L\left(Y_{1}+X_{2}+X_{2}^{2}+X_{2}^{2} Y_{1}\right)
$$

## Dissymmetry, again

Theorem (D.,F.-A.)
$\mathfrak{a}_{R}=\sum_{i}\left(\mathfrak{a}_{R}^{\bullet j}+E_{2}\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)-\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)^{2}\right)-\sum_{i<j}\left(\mathcal{A}_{i}\right)_{R^{(j)}} \cdot\left(\mathcal{A}_{j}\right)_{R^{(i)}}$

## Dissymmetry, again

Theorem (D.,F.-A.)
$\mathfrak{a}_{R}=\sum_{i}\left(\mathfrak{a}_{R}^{\bullet j}+E_{2}\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)-\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)^{2}\right)-\sum_{i<j}\left(\mathcal{A}_{i}\right)_{R^{(j)}} \cdot\left(\mathcal{A}_{j}\right)_{R^{(i)}}$
Example (Vector fields)
$\mathfrak{a}_{R}=Y_{4}+E_{2}\left(Y_{1}\right)-Y_{1}^{2}-Y_{1} \cdot Y_{2}=Y_{4}+E_{2}\left(Y_{1}\right)-Y_{1} Y_{3}$

## Dissymmetry, again

Theorem (D.,F.-A.)
$\mathfrak{a}_{R}=\sum_{i}\left(\mathfrak{a}_{R}^{\bullet j}+E_{2}\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)-\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)^{2}\right)-\sum_{i<j}\left(\mathcal{A}_{i}\right)_{R^{(j)}} \cdot\left(\mathcal{A}_{j}\right)_{R^{(i)}}$
Example (Vector fields)
$\mathfrak{a}_{R}=Y_{4}+E_{2}\left(Y_{1}\right)-Y_{1}^{2}-Y_{1} \cdot Y_{2}=Y_{4}+E_{2}\left(Y_{1}\right)-Y_{1} Y_{3}$
Proof.
(Sketch) Mostly same as before.

## Dissymmetry, again

Theorem (D.,F.-A.)
$\mathfrak{a}_{R}=\sum_{i}\left(\mathfrak{a}_{R}^{\bullet j}+E_{2}\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)-\left(\left(\mathcal{A}_{i}\right)_{R^{(i)}}\right)^{2}\right)-\sum_{i<j}\left(\mathcal{A}_{i}\right)_{R^{(j)}} \cdot\left(\mathcal{A}_{j}\right)_{R^{(i)}}$
Example (Vector fields)
$\mathfrak{a}_{R}=Y_{4}+E_{2}\left(Y_{1}\right)-Y_{1}^{2}-Y_{1} \cdot Y_{2}=Y_{4}+E_{2}\left(Y_{1}\right)-Y_{1} Y_{3}$
Proof.
(Sketch) Mostly same as before. But the isomorphism between trees rooted at vertex or edge other than the center, with ordered pairs of rooted trees, needs to take into account color.

No white vertices:
Unlabeled plane trees.
Minimal black vertices:
Unlabeled 3-gonal cacti with $n$ triangles.
(Bóna, Bousquet, Labelle, Leroux, 2000)

## One white vertex

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 1 | 0 | 0 | 1 | 2 | 5 | 16 | 48 | 164 | 559 | 1952 | 6872 | 24520 |

Triangulations of an $n$-gon with exactly one internal vertex.
(Brown, 1964)

## One white vertex

|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 1 | 0 | 0 | 1 | 2 | 5 | 16 | 48 | 164 | 559 | 1952 | 6872 | 24520 |

Triangulations of an $n$-gon with exactly one internal vertex.
(Brown, 1964)

Both are circular orders of (at least three) Catalan-things (ordered rooted trees or rooted triangulations).
