Suggested: Course Objectives (Learning Outcomes):

a. Become familiar with some of the more popular numerical algorithms for solving certain mathematical problems, such as nonlinear and linear algebraic systems, differential equations, eigenvalue extraction and numerical quadrature.
b. Gain experience writing computer programs to implement some of these algorithms.
c. Learn how to determine the complexity of an algorithm, that is, the asymptotic dependence of computer time on problem size.
d. Learn how to analyze the truncation error of an algorithm, for example, to determine the dependence of error on discretization size.
e. Learn how to anticipate roundoff errors associated with the use of finite precision arithmetic, and to be aware of the type of algorithms which are likely to suffer from serious roundoff error.
f. Learn to choose among competing algorithms for particular applications, taking into account algorithmic complexity, accuracy and stability

Course Activities/Assignments: There will be homework assigned regularly, which will include computer (MATLAB) projects.
Assessment of Course Objectives: Grades will be based on homework and exams, details are at the class website, www.math.utep.edu/Faculty/sewell/4329/4329c.htm
