Preface *vii*

1 Introduction to PDE2D 1

- 1.1 The Collocation and Galerkin Finite Element Methods 1
- 1.2 The PDE2D User Interfaces 7
- 1.3 Accuracy 11
- 1.4 Computer Time and Memory 13
- 1.5 Programming Hints 17

1 The Damped Spring and Pendulum Problems 21

- 1.1 Derivation of the Damped Spring and Pendulum Equations 21
- 1.2 Damped Spring and Pendulum Examples 23
- 1.3 Problems 24

2 Beam and Plate Bending 31

- 2.1 Derivation of Beam Bending Equation 31
- 2.2 Derivation of Plate Bending Equation 32
- 2.3 Beam and Plate Examples 33
- 2.4 Problems 34

3 Diffusion and Heat Conduction 39

- 3.1 Derivation of Diffusion Equation 39
- 3.2 Diffusion and Heat Conduction Examples 40
- 3.3 Problems 51

4 Pricing Options 61

- 4.1 Derivation of Black–Scholes Equation 61
- 4.2 Option Pricing Examples 65
- 4.3 Problems 70

vi | Contents

5	Elasticity	75
5.1	Derivation of Elasticity Equations	75
5.2	Elasticity Examples	77
5.3	Problems	81
6	Incompressible Fluid Flow	95
6.1	Derivation of Navier–Stokes Equations	95
6.2	Stream Function and Penalty Method Approaches	97
6.3	Fluid Flow Examples	97
6.4	Problems	105
7	The Schrödinger and Other Eigenvalue Equations	119
7.1	The Schrödinger Equation	119
7.2	Schrödinger and Maxwell Equations Examples	119
7.3	Problems	126
8	Minimal Surface and Membrane Wave Equations	137
8.1	Derivation of Minimal Surface Equation	137
8.2	Derivation of Membrane Wave Equation	138
8.3	Examples	140
8.4	Problems	142
9	The KPI Wave Equation	149
9.1	A Difficult Nonlinear Problem	149
9.2	Numerical Results	155
	Appendix A: Formulas from Multivariate Calculus	161
	Appendix B: Algorithms Used by PDE2D	163
	Appendix C: Equations Solved by PDE2D	183
	Appendix D: Problem 5.7 Local Solvers	193
	References	205
	Index	207
